#### DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

For control of bacteria and associated slime in pulp, paper or paperboard systems use 0.25 - 1.5 lbs. NALCON 7648 per ton of total paper (dry basis) production. Intermittent application to thick stock chests has proven most effective. Typical feed cycle would be 1 hour on at a dosage of 4.0 lbs./ton and then 7 hours off to give a total average feed of 0.5 lbs./ton fiber. Badly fouled process systems must be cleaned before initial treatment is begun.

Feed NALCON 7648 directly from the drum or diluted with water using a proportioning pump or other application equipment. Application may be anywhere in the system prior to sheet formation where it will be uniformly mixed or to the recirculating white water.
