DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

NALCON 7616 should be added to the end-use product at a point in the processing where there is sufficient agitation and time to achieve good dispersion.

FOR PRESERVATION OF SLURRIES, AND HIGH VISCOSITY SUSPENSIONS (COATINGS, CLAY SLURRIES, GLUES, ADHESIVES)

Test data show that NALCON 7616 is effective at use levels of 0.04 - 0.1%. The exact amount will depend on the components, storage time and temperature, etc., and can best be determined by actual test.

For preservation of slurries and high viscosity suspensions, the material should be added at a point in the processing where there will be sufficient time and agitation for good dispersion.

FOR BACTERIAL AND FUNGAL SLIME CONTROL IN PULP AND PAPER MILL SYSTEMS

Test data show that NALCON 7616 in concentrations of 10-50 ppm will inhibit the growth of slime-forming bacteria and fungi in pulp and paper mill systems. NALCON 7616 should be added to the stock system at a point where there will be good agitation and time for dispersion at a rate of 0.083 - 0.415 lb/1000 gal of treated water. Each mill system varies considerably as to the amount of NALCON 7616 required. Under severe conditions, doses approaching 50 ppm are required. Under less severe conditions, lower dosages approaching 10 ppm should be used. Your Nalco representative can offer technical assistance in solving in-plant slime control problems.

For slime control, NALCON 7616 should be added at the beaters or as far back in the system as possible to allow time for dispersion. The material is packaged in pre-measured water-soluble plastic bags for accurate additions and ease in handling.
