Pulp & Paper Mills: Add where uniform distribution is assured.

Aqueous Paints: Incorporate into the makeup water during the grind.

Latex Emulsions: Add using moderate agitation immediately following the cool-down of the emulsion and prior to entering the storage tank facilities.

Adhesives & Joint Cements: Incorporate with agitation into the makeup water blend. However, where the adhesive is heated, Metasol CB 220 should be added during the cool-down cycle.

Dispersed Pigments: Add using moderate agitation immediately following the cool-down of the dispersed pigment and prior to entering the storage tank facilities.

Metalworking Fluids: Incorporate into metalworking fluid formulations by addition to the concentrate coupled with moderate agitation. It should be added to the concentrate to provide 0.125-0.5% of Metasol CB 220 in the final diluted fluid. Metasol CB 220 can also be added or metered into the final diluted cutting fluid either prior to its addition to the system, or after the system has been filled. Stir thoroughly, or operate the system for a sufficient time after addition to thoroughly mix the preservative with the fluid.

Waxes, Polishes and Inks: Incorporate into the makeup water blend with moderate agitation.
