FAST SHOCK

FAST SHOCK is a fast dissolving shock treatment for swimming pools. It is used to quickly raise the free chlorine level in the pool water to a level that will kill bacteria and algae. It is also used to remove iron and copper stains from the pool water. FAST SHOCK is a fast acting product and should be used immediately after the pool has been cleaned and the water is clear. It is important to follow the directions on the label for proper use and to avoid contact with the eyes and skin. FAST SHOCK is a powerful oxidizing agent and should be stored in a cool, dry place away from children and pets. It should be kept in its original container and not transferred to other containers.
