This product helps control bacterial, algal, and fungal slime growths in air washers, cooling towers, and similar recirculating water systems. Badly fouled systems should first be manually cleaned. An initial dose of 150-200 ppm of product should be added as a slug dose, bleed-off should be shut off for the first 24 hrs. Subsequent slug doses of 50-75 ppm of product should be added weekly, or more if needed for continued control of algae and bacterial slime. These doses must be added to the sump.
