Subsequent slug additions of 10 to 15 (one per million) should be employed even if necessary. The frequency of addition depends on the amount of bleed-off and the severity of the problem. Slug additions should be made to water cooling towers.

DIRECTIONS

AMPICIDE 5 is used to control algae, bacteria and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, micro-biological slime and other deposits. An initial slug addition of 12 to 30 fluid ounces of AMPICIDE 5 per 1,000 gallons of water, to provide 95 to 237 parts per million of AMPICIDE 5 based on the total weight of water in the system is recommended. Repeat if necessary until control is evident. Subsequent slug additions of 3 to 30 fluid ounces of AMPICIDE 5 per 1,000 gallons of water (24 to 237 parts per million) should be employed every 2 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleed-off and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.
