NATIONAL CHEMSEARCH

ROOT OUT

CONTROLS ROOTS IN SEWER LINES

ACTIVE INGREDIENTS:

Dichlobenil, (2,4-dichlorobenzoic amide)..... 2.12*

INERT INGREDIENTS:..... 97.8%

TOTAL 100.0%

*Equivalent to 9.17 pounds per gallon.

THIS PRODUCT CONTAINS THE TOXIC INERT INGREDIENT FORMALDEHYDE.

KEEP OUT OF REACH OF CHILDREN

WARNING:

Avoid contact with eyes, nose, mouth, and skin. Wash thoroughly with soap and water after use.

Use only in areas where roots are present.

EPA REG. NO. 1769-255

ROOT OUT is a systemic dichlobenil which kills the roots and prevents new root growth. Dichlobenil is readily absorbed on to germs and insects. Millions of germs and insects in the film coat providing a barrier against root growth. It kills the developing root of seeds growing in the pipe, and in root lines. New roots sprout from out of the pipe, and where cracks and holes in the pipe are located, and in the soil when they contact with the dichlobenil in the pipe.

FOR MUNICIPAL SEWER USE:

Find the lines that have root problems. Start treatment with the first manhole at the upstream section end of the line. Sections below can be treated with the same solution after sealing the first section by passing the solution down stream.

The sewer line should be plugged at the downstream end of the section to be sealed.

Determine the volume of water the sewer line will hold by using the table below. For example: 6" sewer line, 200 feet long will require 200 gallons of water; therefore, add 1 1/2 gallons of National Chemsearch ROOT OUT to the ROOT OUT needed for pipe capacity and mix with water as if it is being poured down the sewer line.

SEWER PIPE CAPACITY

<u>Pipe Diameter</u>	<u>1 Foot Length</u>
4 inches	0.65 gallons
6 inches	1.47 gallons
8 inches	2.61 gallons
10 inches	4.1 gallons
12 inches	5.9 gallons

After the pipe diameter has been determined, the amount of water needed to fill the pipe can be determined by multiplying the pipe diameter by the length of the pipe. The amount of water needed should be placed in the downstream pipe section to be treated. Following the ROOT OUT treatment, the amount of water needed should be placed in the pipe to be treated to seal the pipe. The amount of water needed should be placed in the pipe to be treated to seal the pipe. The amount of water needed should be placed in the pipe to be treated to seal the pipe.

STORAGE AND DISPOSAL

Do not store this product in a container that has been used for another product.

STORAGE: KEEP CONTAINER CLOSED.

PESTICIDE DISPOSAL: Waste or surplus of this product may be disposed of in this manner. The waste should be disposed of in a container that has been used for another product.

CONTAINER DISPOSAL: This product is not intended for recycling or reuse. The container should be disposed of in a container that has been used for another product.

NOTE: This product is not intended for use in residential areas. It is intended for use in commercial and industrial areas.

TO REORDER:

Contact your local distributor for more information on this product.
