**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Read the entire label.

For the best results, spray in the early morning or late evening when insect activity is minimal. Stand a safe distance from the nest and not directly underneath. (Remove protective cap.) Hold can upright and point spray opening toward the nest with the wind at your back. Spray until the nest is thoroughly saturated to kill the entire nest population. The residual action will kill wasps and hornets returning to the nest. Wait at least 24 hours before removing the nest.

To kill wasps, hornets, and yellow jackets under eaves, screens, window frames, doors, patios, cracks, holes or crevices wherever insects are noticed, spray for about 1-2 seconds or until surfaces are moist. To prevent entrance of insects into the house, spray around points where insects may enter such as outside plumbing, faucets, etc., and cracks or crevices in foundations as well as along sills and ledges.
