THE FEDERAL INSECTICIDE  
ACT OF 1947  
REGISTERED  
SUBJECT

**DIRECTIONS FOR USE**

This product emulsifies readily, forming a stable emulsion when added to water. Slight agitation will maintain a uniform dispersion.

**COTTON INSECTS:** In early season applications for thrips and flea-hoppers apply 1 pint per acre in 1 to 5 gallons of water and repeat at weekly intervals as long as infestations persist.

In pre-square applications for boll weevil control apply 1 quart per acre in 1 to 5 gallons of water in 2 or 3 applications at weekly intervals at chopping time or as soon as the first weevils appear in the field. Consult local agricultural authorities regarding timing and adaptability of early season control programs in your locality.

For a mid-season control program for boll weevil apply 1 quart per acre in 2 to 5 gallons of water starting when up to 10% of the squares are punctured and repeat at 5 to 7 day intervals until 3 applications have been made or as long as weevil infestation persists.
