PRECAUTIONARY STATEMENTS HAZARDOUS TO HUMANS & DOMESTIC-ANIMÁLS:

DANGER — PELIGRO

DANGER: Fatal if inhaled. Corrosive, causes irreversible eye damage. May be harmful or fatal if swallowed or absorped through the skin. Do hot get in eyes, or on skin. Do not breathe dust, vapor, or spray mist: When haridling aither products containing TPTH or spray diluted mixtures, wear protective clothing tlong pants, long sleeve shirt, impe meable gloves, hat, boots, and a pesticide respirator jointly approved by the Mining Enforcement and Safety Administra tion and the National Institute for Occupational Safety and Health.) When handl ing the concentrated products, wear a face shield. Wash thoroughly with soap and water after handling and before eating or smoking. Remove contaminated clothing and wash before reuse. Do not enter treated areas for at least 24 hours after treatment

The United States Environmental Protection Agency has determined that triphenyltin hydroxide causes birth defects in laboratory animals. Exposure to triphenyltin hydroxide during pregnancy should be avoided

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish and wildlife. Do not apply directly to water or vetlands. Drift or runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Cover or incorporate spills. Do not contaminate water by cleaning of equipment or disposal of wastes

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling

RE-ENTRY STATEMENT

Do not apply this product in such a manner as to directly or through drift expose workers or other persons. The area being treated must be vacated by unprotected persons

Do not enter treated areas without protective clothing until sprays have dired. Because certain states may require more restrictive re-entry intervals for various crops treated with this product, consult your State Department of Agriculture for further information.

Written or oral warnings must be given to workers who are expected to be in a treated area or in an area about to be treated with this product.

NGER. Do not enter treated areas without appropriate protective clothing for 24 irs after application. In case of accidental exposure, contact your nearest Poison. Control Center,

DU-TER FLOWABLE is non flammable.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or En vironmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Triple rinse for equivalents, Then offer for respect ing or reconditioning, or puncture and dispose of in a sanitary landfill, or in cineration, or, if allowed by state and local authorities, by burning It burned; stay out of smoke

DU-TER FLOWABLE Fungicide can be applied as a ground or aerial spray to control fungal infestations on listed crops. Application rates are for general use. The state agricultural extension or agricultural experiment station specialists should be consulted for specific applications and timing recommendations. With any apray ap plication thorough coverage is essential for good control

Apply this product only as specified on this label

PRECAUTIONS

DU-TER FLOWABLE Fungicide can be applied in continuous with SUPER SIX^{III} for additional fungicidal control. Do not add surfactants, spreads, stickers. Lo not graze dairy or meat animals in treated areas.

GENERAL INSTRUCTIONS

Before adding DU-TER FLOWABLE to the spray tank, actually fill with water. Add the desired amount of DU-TER FLOWABLE according to the rates listed elsewhere. After mixing thoroughly, add remaining water to appropriately. Continuous agitation within the spray tank is essential. If used in combine to with a wettable powder product place the wettable powder in partially filled tank and if a liquid, add DU-TER FLOWABLE to tank first

APPLICATION METHOD

GROUND - Mix with water for a total solution of 1 100 callons per acre.

AERIAL Mix with water for a total solution of 3-2

SPRINKLER IRRIGATION In non-mobile systems, and cation may be made as a part of the usual irrigation or as a separate treatment of prevent backsiphoning of pesucide into water source. Any irrigation water treat of with this product should be held on the treated area until it is absorbed by the sal, it should not be turned into the tail water or fed back into the irrigation system.

IRRIGATION EQUIPMENT Tank connected to the section side of irrigation pump, field sprayer or other pressurized equipment connected to the main irrigation line may be used for injection 6 d agitation must be provided in injection tank

CALIBRATION AND USE IN SET SYSTEMS AND OTHER NON-MOBILE SYSTEMS:

1. Measure acreage covered by sprinklers.

Operate solid set irrigation system and injection equipment at normal pressures.

3 Fill tank of injection equipment

- Adjust flow from injection equipment to use contess o er a period of 10 to 30 minutes
- 5. For application of DU-TER FLOWABLE, mix defed amount of product for acreage to be covered (see chart for rates per acre mining, stages of growth and other information) into quantity of water used during prior calibration and operate entire system for amount of time established during calibration DU-TER FLOWABLE should be injected at the end of the migation cycle or as a separate application.
- Stop injection equipment after treatment is completed and continue to operate irrigation system until DU-TER FLOWABLE has been cleared from the last sprinkler head. Refer to dye method of timing discussed below.

CALIBRATION AND USE IN CENTER-PIVOT AND OTHER MOBILE SYSTE

1. Operate center pivot system and injection equipment at normal pressu

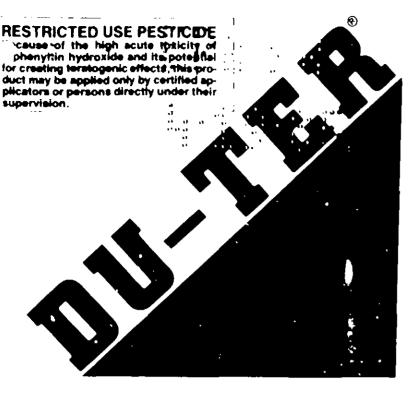

2. Fill tank of injection equipment.

- 3. a) For systems other than center pivot, operate entre systems trip, measure time required, amount of water used to include
 - b) For center pivot systems, the water flow
- of the system are given in the many or 4. For application of DU-TER Fig. E. duct for acreage to be covered Lege of for rates). tity of prior calibration and inject rtor one complete revolution of the field.
- tope after Do-ment after treatm 5. If irrigation is to **BLE** has been applied, shut condited and continue to operate off the injection exament after treatment of computed irrigation system until DU-TER sprinkler head. Refer to dye me anscussed below. JLE has been cleared from the last
- 6. With mobile systems, irrigation may be continued after injection has been stopped

DYE CALIBRATION

A recommended procedure for establishing the time which will elapse from stopping the injection of DU-TER FLOWABLE to its clearance from the last sprinkler is as follows:

- 1. During calibration of injection equipment as described above, insert a water soluble Food, Drug and Cosmetic approved dye into the irrigation line at the injection point and record the time it takes for the dye to be reliased from the last sprinkler
- 2 Collection of water from the last sprinkler in a glass jar will assist in observing when dyed water reaches that point

Flowable 30 Triphenyltin Hydroxide Fungicide

Active Ingredient: Triphenyltin hydroxide. Inert Ingredients . .

Total: .

gallon

OF REACH OF CHILDREN **PELIGRO**

POISON

IF ON SKIN. Wash with plenty of soap and water

IF INHALED. Remove vict in to fresh air. If not breathing, give artificial respiration, preferably mouth to nouth. Get medical attention

IF IN EYES Flush with plenty of water Call a physician

IF SWALLOWED Do not induce vomiting. Drink promptly a large quantity of milk, egg whites, gelatin solution, or if these are not available, drink large quantities of water. Call a physician or Poison Control Center
