

CLEANS

REMOVES MILKSTONE

SANITIZES

MIXING IS EASY

Onyx Acid CD Dairy Cleaner/Sanitizer is easily and quickly dispersed in hot or cold water and in water up to 1700 ppm of hardness (as calcium carbonate) to form a completely uniform solution. Onyx CD Acid Dairy Cleaner/Sanitizer when used at a 1:500 aqueous dilution (200 ppm active quaternary) may be used on food processing and dairy equipment without the necessity of a final potable water rinse.

CLEANING BULK MILK TANKS

As soon as possible after milk has been removed from bulk tank, rinse tank completely with cold water and allow to drain. Place 4 gallons of warm water at 120°F in tank and add 1 ounce (2 tablespoons) Onyx Acid CD Dairy Cleaner/Sanitizer to the water in the tank. Scrub tank, mixers and covers and then allow to drain.

SANITIZING MILK EQUIPMENT & COWS UDDERS*

Previously cleaned milking equipment, pails, inflations and tubing should be sanitized prior to milking operations by preparing a 200 ppm solution of active quaternary by mixing 1 ounce (2 tablespoons) Onyx Acid CD Dairy Cleaner/Sanitizer in 4 gallons of water. Scrub or dip equipment into the solution and allow to drain prior to beginning of milking operation.

Use cloth to wipe udders with sanitizing solution prior to milking.

***FDA PETITION APPROVAL PENDING**
