Subject: **SC-RTU Disinfectant Cleaner**
EPA Registration Number 1839-220
Application Dated March 11, 2011
EPA Received Date March 15, 2011

Dear Mr. Isaac:

The following amendment submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), as amended, is acceptable with comment.

Proposed Amendment:

- Addition of claims against bacteria and viruses

Efficacy Review:

1. The submitted efficacy data **support** the use of the product, SC-RTU Disinfectant Cleaner, as a disinfectant with bactericidal activity against the following microorganisms on hard, non-porous surfaces in the presence of a 5% organic soil load for a 2-minute contact time:

Multi-Drug Resistant <i>Acinetobacter baumannii</i>	MRID 484198-01
Extended β -Lactamase <i>Escherichia coli</i>	MRID 484198-02
<i>Klebsiella pneumoniae</i> New Delhi Metallo-Beta Lactamase (NDM-1) Carbapenem Resistant	MRID 484198-03

Complete killing was observed in the subcultures of the required number of carriers tested against the required number of product lots. Neutralizer effectiveness testing showed positive growth of the microorganisms. Viability controls were positive for growth. Sterility controls did not show growth.

2. The submitted efficacy data **support** the use of the product, SC-RTU Disinfectant Cleaner, as a disinfectant with virucidal activity against the following microorganisms on hard, non-porous surfaces in the presence of at least a 5% organic soil load for the indicated contact times:

Human rotavirus	1 min	MRID 484198-04
Rhinovirus type 39	2 min	MRID 484198-05
Avian influenza virus (H5N1), NIBRG-14	30 sec	MRID 484198-06
Human immunodeficiency virus type 1	30 sec	MRID 484198-07
Duck hepatitis B virus	1 min	MRID 484198-08 and -09
Bovine viral diarrhea virus	1 min	MRID 484198-10 and -11

Recoverable virus titers of at least 10⁴ were achieved. In studies against Duck hepatitis B virus and Bovine viral diarrhea virus, cytotoxicity was observed in the 10⁻² dilutions. In studies against Rhinovirus type 39, Avian influenza virus (H5N1), NIBRG-14, and Human immunodeficiency virus type 1, cytotoxicity was observed in the 10⁻² and 10⁻³ dilutions. In studies against Human rotavirus, cytotoxicity was observed in the 10⁻², 10⁻³, and 10⁻⁴ dilutions. Complete inactivation (no growth) was indicated in all higher dilutions tested. At least a 3-log reduction in titer was demonstrated beyond the cytotoxic level. In studies against Duck hepatitis B virus and Bovine viral diarrhea virus, the initial and confirmatory studies were performed at the same laboratory, but under the direction of different study directors. The confirmatory studies tested one product lot, not the standard two product lots.
