## COPPER N-2

### Water Repellent

### Wood Preservative

A ready to use preservative containing 2% metallic copper as Copper Naphthenate, for preventing insect attack and decay of wooden structures, and cotton or other cellulose fabrics. Dry or cured paint and lumber will not burn the skin on short contact. May be painted over when dry. Ideal for general use and nursery use.

ACTIVE INGREDIENTS	100%
Petroleum distillate	80%
*Copper Naphthenate	20%

\*Equivalent to 2% metallic copper.

**CAUTION:** Keep Out of Reach of Children

See label panel for additional cautions.

### Directions for Use

**For Treating Fence Posts** Fill a container with posts to be treated and pour in preservative until container is full. Posts should be peeled and dry before treatment. Soak 24 hours. The posts may be set out any time thereafter. If only a few posts are to be treated soak part that contacts ground for 24 hours and paint upper portion several coats with brush or spray.

**For brush, siding, etc.** Apply preservative to brush, siding, etc. with brush or spray. For brush, etc. dip for 30 minutes for each inch of thickness. If the brush or siding is to be used in contact with the ground, it should be treated with preservative on all sides. For brush, etc. apply several coats with spray or brush. Allow to dry thoroughly before use.

**For Destroying Termites** For cut and destroy tunnels. Replace badly damaged wood with new treated pieces. Soak exposed wood with preservative by spray or brush. Apply generously to joints and cracks. Treat soil around foundations and palls with approved soil treatment, such as Tri-nite. Do not use.

Fence, tarpaulins, ropes, burlap, etc., should be dipped in the solution. Allow to dry thoroughly before use. For additional water repellency add 1 pound paraffine to each 10 gallons of solution.

The pleasing green color imparted to the wood is permanent in protected locations, but bleaches out when exposed to the weather. The preservative qualities are not lost by this bleaching - only the color is lost.

**For treating tree pots in nurseries** to prevent root growth in pots, dip pots in this solution and allow to dry before using. Use only on clean pots. Some retardation of plant growth in recently treated pots may be expected.

### Cautions

Keep out of reach of children. Do not use on the skin. Do not use on clothing. Do not use on food. Do not use on electrical wiring. Do not use on painted surfaces.

### Notice of Warranty

This product is warranted to be of the quality and performance as described on our container. The Liang Chemical Company makes no warranty, expressed or implied, that all products conform to the description on the label.
