FACE FLY TREATMENT

CAUTION

**READ DIRECTIONS BEFORE USING
SEE CAUTIONS ON SIDE PANEL
KEEP OUT OF REACH OF CHILDREN**

ACTIVE INGREDIENTS:	100.00%
Pyrethrins	.06%
*Piperonyl butoxide, technical	.12%
N octyl bicycloheptene dicarboximide	.20%
Di n-propyl isocinchomeronate	.40%
White Mineral Oil (National Formulary Grade)	99.22%
*Equivalent to .096% of (butylcarbityl) (6 propyl piperonyl) ether and .024% of related compounds.	

CENTRAL PETROLEUM CO.
CLEVELAND OHIO Since 1911 WALSOTT IOWA

**Cen-Pe-Co Face Fly Treatment
Repels and Kills These
Dangerous Pests**

Face Flies, unlike most other types, are allergic to shade, preferring bright sunshine. Any effective attack against them must be based on a compound which can be applied directly to the face and other affected areas, without rapid evaporation, and without any irritating or harmful effects on the surfaces involved while the animals are out in the open.

Cen-Pe-Co Face Fly Treatment is specially designed and formulated for this particular job. It contains the most potent and effective Face Fly repellants yet developed, blended with the highest grade white mineral oil meeting National Formulary Standards. The resulting compound has maximum effectiveness against the flies, and can be used for repeated application to sensitive areas near the eyes, nostrils and lips, and other parts of the skin which may be involved.

When used as directed, Cen-Pe-Co Specially Formulated Face Fly Treatment can always be depended upon to do an outstanding job.

ACTIVE INGREDIENTS:	100.00%

*Equivalent to .096% of (butylcarbityl) (6 propyl piperonyl) ether and .024% of related compounds.	

DIRECTIONS FOR USE

Cen-Pe-Co Face Fly Treatment may be applied by hand or Dis-Pen-Sor.

Use a heavy cloth to wipe Cen-Pe-Co Face Fly Treatment on the faces of cattle, one (1) fluid ounce per animal. Pay particular attention to the area around the eyes, nostrils and pool behind the horns. Treatment should be made daily while the cattle are stanchioned for morning milking. This gives protection from face flies for 24 hours.

An easier way to protect large herds and cattle in pasture is through the use of one or more Cen-Pe-Co Dis-Pen-Sors. These are specially designed to dispense Cen-Pe-Co Face Fly Treatment as each animal contacts the unit. The large reservoir of the Dis-Pen-Sor holds sufficient Cen-Pe-Co Face Fly Treatment for at least one week.

CAUTION

Do not spray entire animal with this material. Do not contaminate milk or milk handling equipment. Do not store, pour or spill near heat or open flame. Harmful if swallowed. Keep out of reach of children.
