**SODIUM HYPOCHLORITE
SOLUTION**

CAUTION

USDA Reg. No. 1926-2

Sold in **navy brand.**
MANUFACTURING CO.

**DEODORIZES
REMOVES STAIN**

DIRECTIONS: Two ounces to four gallons of water will make a solution of 200 PPM available Chlorine.

For Hotels, Restaurants, Soda Fountains and Kitchen use; dishes, glasses, silverware, etc., should be washed well with clean warm water and then 2 oz. of Sodium Hypochlorite Solution for each 4 gallons of water should be added to the tank. Rinse dishes in this solution allowing them to remain for several minutes.

Change water when necessary since any organic matter carried into this rinse solution will lower its sanitizing properties. Sodium Hypochlorite should be added every time water in the rinse tank is changed.
