

ELCO

VEGETATION KILLER-15

DIRECTIONS FOR USE

Uniformly spray 2½ - 3 gal. per 1,000 sq. ft. of soil surface, undiluted (100-120 gal. per acre). Thoroughly wet all foliage to insure contact action. Best results are obtained when applications are made during or soon after weed emergence while growth is succulent. Where vegetation is tall and dense, use 5 gal. per 1,000 sq. ft. (200 gal. per acre). For control of hard-to-kill perennial weeds and grasses such as Johnsongrass, Bindweed, and Wild Carrot, use 8-12 gal. per 1,000 sq. ft. Although ELCO Vegetation Killer - 15 has considerable activity through foliar contact, much of its activity is through the roots and, therefore, adequate rainfall to move the chemical into the root zone is necessary.

Under conditions where the rainfall is high and the growing season long, a second application may be necessary to maintain a weed-free soil surface.

Care must be taken to keep this herbicide away from desirable flower beds, lawns and shrubs. Do not apply over roots of valuable trees or woody ornamental plants. Only apply herbicide outside the dripline of trees. Avoid spray drift to desirable plants.

Do not reuse empty drum. Return to drum re-conditioner or destroy by perforating or crushing, and burying in a safe place away from water supplies.

<u>ACTIVE INGREDIENTS:</u>	95.5%
2,4-bis (isopropylamino)-	
6-methoxy-s-triazine* _____	1.5%
Petroleum distillate _____	94.0%
<u>INERT INGREDIENTS:</u>	4.5%
TOTAL	100.0%
