

ELCO VEGETATION KILLER-EC

DIRECTIONS FOR USE

Uniformly spray one gallon of ELCO VEGETATION KILLER-EC mixed in ten gallons of water over 1,000 sq. feet of soil surface. Thoroughly wet all foliage to insure contact action. Best results are obtained when applications are made during or soon after weed emergence while growth is succulent. Where vegetation is tall and dense, use 1½ gallons of ELCO VEGETATION KILLER-EC in ten gallons of water per 1,000 sq. feet. For control of hard-to-kill perennial weeds and grasses such as Johnsongrass, bindweed, and Wild Carrot, use 3 - 4½ gallons per 1,000 sq. feet. Although ELCO VEGETATION KILLER-EC has considerable activity through foliar contact, much of its activity is through the roots and therefore, adequate rainfall to move the chemical into the root zone is necessary.

Under conditions where the rainfall is high and the growing season long, a second application may be necessary to maintain a weed-free soil surface.

Care must be taken to keep this herbicide away from desirable flower beds, lawns and shrubs. Do not apply over valuable trees, or woody ornamental plants. Only apply herbicide outside of the drip line of trees. Avoid spray drift to desirable plants.

Do not reuse empty drum. Return to drum re-conditioner or destroy by perforating or crushing and burying in a safe place away from water supplies.

ACTIVE INGREDIENTS:

| | | |
|--------------------------|-------|--------|
| 2,4-bis (isopropylamino) | | 84.64% |
| 6-methoxy-s-triazine* | _____ | 3.73% |
| Petroleum distillate | _____ | 88.91% |

INERT INGREDIENTS:

| | | |
|-------|-------|---------|
| | _____ | 15.36% |
| TOTAL | _____ | 100.00% |
