DIRECTIONS

CRACKS, WATERBUGS, SILVERFISH, AND SPIDERS

Apply thoroughly to infested cracks and crevices in kitchen, bathroom, closets, basement and storage rooms. Apply by use of a coarse, wet spray or by use of a paint brush or similar means to infested areas on baseboards, under sinks, stoves, drainboards, cabinets, drawers, places of concealment and breeding places. Repeat when necessary.

BOX ELDER BUGS

Apply spray directly outdoors on insects or where they habit outdoors, such as: to the lower parts of tree trunks and outside walls of buildings.

FLIES AND MOSQUITOES

For reducing fly and mosquito population that may enter the dwelling, apply by brushing or as coarse, wet spray to selected outside portions of the residence such as around windows, doors and screens. Do not apply in the household. Apply to walls and ceilings of porches and in outbuildings.

ANTS

Thoroughly spray or paint surfaces locally where ants travel, especially around doors, window sills and drainboards. Repeat application when necessary. Spray outside of garbage cans every two weeks to kill ants and to aid in preventing breeding.

ANIMAL FLEAS AND BLOWN DOG TICKS

Apply with a coarse spray or brush to animal sleeping quarters, outside the household especially in cracks and crevices. Replace animal bedding after each treatment. Do not apply directly to animals. Repeat when necessary.

BEETLES

Apply to the underside of carpets where these insects may be found and spot treat the infested area on the top surface. Repeat application as needed.

Insect Killer*

PRICE
\$1.49

FRAGRANT and LASTING

Insect Killer will aid in the control of many insects and can be used in place of messy and poisonous powders. Best results are obtained when Insect Killer is used as a residual spray. Under proper conditions the residue, when applied according to directions, will continue to kill insects coming in contact with this protective film for up to two months. Insect Killer was developed especially for the use of killing those hard to kill Waterbugs and Roaches. It contains 2% Chlordane, which gives the lasting effect and pyrethrins, which is the quick knock down agent. Insect Killer also contains a high grade perfume which makes it pleasant to use.

RESIDUAL APPLICATION

The application should be made with a sprayer producing a coarse spray, a paint brush or an oil can. Insect Killer should be applied to all places frequented by the insects to be controlled; application should be made in quantity sufficient to leave a visible dampness on the surface.

CAUTION

Inflammable solvent. Do not spray near open flame. This solution if brought into repeated or prolonged contact with skin can cause toxic symptoms. Avoid inhalation and skin contact. Avoid contamination of foodstuffs. Do not use on household pets, humans or plants. Do not apply to asphalt or tar type materials as the solvents in this spray may stain or effect. In case of skin contact wash with soap and water. Harmful if swallowed. Keep out of reach of children.

Toxic to fish and wildlife
Birds feeding on areas may be harmed
Keep out of any body of water
