HEADLINE:

Directions For Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

COPY:

The best way to control crabgrass is to kill it just as it's germinating, before it emerges from the soil.

That's how Wondergro Spring Crabgrass Preventer/Lawn Food works. It also controls barnyard grass and foxtail that way.

For best results, apply the material very early in the season, when daytime temperatures are still in the 40s and 50s, and the forsythias and lilacs are just beginning to show some new green.

Apply at a steady, walking pace according to the spreader settings recommended below.

After application, wait at least 6 weeks before you reseed your lawn or any bare spots.
