RABBIT and Deer REPELLENT

NURSERY STOCK—FRUIT TREES—ORNAMENTALS

RABBITS — DEER — MEADOW MICE

ACTIVE INGREDIENT	
Thiram (Tetramethythiuram disulfide).....	20%
INERT INGREDIENTS.....	80%
Total	100%

Contains 1.75 lbs. Thiram Technical per Gallon

Net Contents: 1 pint

READ ENTIRE LABEL BEFORE USE. OBSERVE ALL CAUTIONS.
SHAKE WELL BEFORE USING. Keep container tightly closed to prevent evaporation. Keep from freezing. Clean application equipment immediately after use, before it dries.

GENERAL INFORMATION

Science Rabbit and Deer Repellent is a contact repellent containing 20% Thiram. It is a specially formulated, stable suspension which protects shrubs, ornamental plantings, nursery stock and apple and peach trees from the feeding damage caused by rabbits, deer, and meadow mice. A single application will protect treated parts for as long as 3 months, depending on weather conditions. Apply only on listed fruit trees (apples and peaches).

DIRECTIONS FOR USE

Shake well before mixing. Mix with equal parts of water. Mix only the quantity to be used and shake the diluted mixture thoroughly before application. The diluted repellent should be used immediately. Apply as a spray, dip, or brush application.

SPRAY APPLICATION. Apply as a full coverage spray on tree seedlings before planting, or ornamental plantings, or other established nursery stock. Apply with a hand sprayer or a mechanical sprayer. Apply on ornamentals, other nursery stock and on listed fruit trees in late summer or early fall, or when rodent feeding damage is first noticed.

DIP APPLICATION. Apply to seedling ornamental trees or listed seedling fruit trees before planting by dipping in the solution to thoroughly wet the foliage and other parts of the seedling to be protected. Excess repellent should be permitted to run off plants without coming in contact with the roots.

SEEDLING and NURSERY PLANTING STOCK SHOULD BE PERMITTED TO DRY THOROUGHLY BEFORE PLANTING or STOCKING

EPA Est. No. 2125-IL-1

BRUSH APPLICATION. Apply on lower trunk of ornamental plantings or listed fruit trees from ground level to a height of approximately 2½ feet to protect plants from injury to trunk.

WHEN TO APPLY. Apply only when surfaces of plant to be treated are dry and when conditions are favorable for drying, preferably during periods of moderate temperature and light winds, to allow the repellent film to form and set properly. Spraying under favorable conditions is also essential to avoid excessive run-off of the diluted repellent. Listed fruit trees are to be treated in the dormant season only.

CAUTION: HARMFUL IF SWALLOWED OR INHALED. May cause irritation of eyes, nose, throat and skin. May cause allergic skin reactions. Avoid breathing dust or spray mist. Avoid contact with skin, eyes or clothing. Wash thoroughly after handling. Consumption of alcohol before or after exposure to Thiram may result in symptoms of nausea, vomiting, fatigue or flushing. In case of contact, flush skin or eyes with plenty of water; for eyes, get medical attention. **DO NOT USE ON PLANT PARTS THAT ARE TO BE USED FOR FOOD OR FEED.**

ENVIRONMENTAL HAZARD. This pesticide is toxic to fish. Use with care when applying in areas adjacent to any body of water. Keep out of lakes, streams or ponds. Apply this product only as specified on this label.

DO NOT REUSE EMPTY CONTAINER. WRAP CONTAINER AND PUT IN TRASH COLLECTION.

NOTICE: Seller makes no warranty or guarantee of any kind, express or implied, concerning effects of use of this product, other than those specified on this label. Buyer, or User, accepts all responsibility for results due to misuse of this product.
