AMMATE-X

Weed & Brush Killer

Kills unwanted growth
in DRIVEWAYS and WALKS

- Controls POISON IVY, POISON SUMAC, POISON OAK, brambles, other brush
- Kills undesirable trees
- Prevents sprouting of tree stumps

ACTIVE INGREDIENT		
Ammonium Sulfamate	95%	
INERT INGREDIENTS	5%	
	TOTAL	100%

Net Weight: 1 pound

©AMMATE-X registered trade mark of E. I. DuPont de Nemours & Company, Inc.

CAUTION: KEEP OUT OF REACH OF CHILDREN
See other cautions on back panels

GENERAL INFORMATION

AMMATE-X Weed and Brush Killer is very effective for control of weeds and grasses in unwanted areas and for killing woody plants and brush. It will also kill undesirable trees and prevent sprouting of tree stumps.

NOTE: Heavy application of AMMATE-X may cause temporary non-productivity of soil. This condition usually disappears in the "over-winter" period. Also, some species of woody plants and perennial weeds are difficult to control; therefore re-treatment may be necessary if regrowth occurs.

DIRECTIONS FOR USE

AMMATE-X dissolves readily in water. The solution may be applied through ordinary sprayer, sprinkling can, or hose-end spray device.

WOODY PLANTS: POISON IVY, POISON OAK, POISON SUMAC, tree sprouts, brambles and other brush. Use 1 lb. per gallon of water. Apply as a drenching spray to well-developed foliage. Wet foliage thoroughly. For best results apply during periods of high humidity. For difficult-to-wet foliage add 1/4 teaspoon Spreader-Sticker per gallon. Re-spray if any recovery is noted.

DRIVEWAYS, WALKS, SIMILAR AREAS. To kill unwanted vegetation use 1 lb. AMMATE-X per gallon of water. Thoroughly wet foliage and stems of unwanted vegetation. The degree of control and duration of effect will vary with weed species, rainfall, temperature and other conditions.

Manufactured by
E. I. DuPont de Nemours & Co. (Inc.)
Wilmington, Delaware

TO PREVENT SPROUTING OF TREE STUMPS.

Apply dry AMMATE-X, directly from this container, liberally on freshly cut stump surface, especially around the outer edge. Or soak surface thoroughly with a solution of 1 lb. AMMATE-X in one quart of water or 4 lbs. per gallon. This treatment will not remove stumps. It prevents sprouting of the stump. For stump removal treat with SCIENCE STUMP REMOVER.

UNDESIRABLE TREES. Make a continuous cut, or "frill" around base of tree with downward axe strokes, cutting into the sapwood. For best results this cut, or channel, must be continuous. Apply dry AMMATE-X as a continuous band in this "frill" or channel; or saturate frill with solution of 1 lb. AMMATE-X per quart of water or 4 lbs. per gallon.

CAUTION. Avoid prolonged contact of skin with strong solutions of this material. In case of contact, wash off with plenty of water. Aim sprays of this material away from lawns and desirable plants to avoid injury since this material is non-selective. Coarse sprays are less likely to drift. Do not apply to, or drain or flush equipment on desirable plants or vegetation. Wash sprayer thoroughly after use to remove all traces of AMMATE-X and to reduce corrosion. Keep package tightly closed to avoid moisture absorption, since AMMATE-X absorbs moisture readily.

NOTICE. Seller makes no warranty or guarantee of any kind, express or implied, concerning effects of use of this product other than those specified on this label. Buyer, or User, accepts all responsibility for results due to misuse of this product.
