General Information
PREVEX is a completely water miscible fungicide concentrate.

PREVEX is intended for use on turfgrass which is subject to Pythium blight (Cottony Blight, Grease Spot). It may be used after germination to control Pythium damping-off in turf, or on established turf to prevent or control Pythium blight.

PREVEX does not afford broad spectrum disease control for *Rhizoctonia* sp. (brown patch), *Sclerotinia* sp. (dollar spot), or *Helminthosporium* sp. (leaf spot). Use a broad spectrum fungicide if these diseases coexist with Pythium blight.

Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Apply to established turf for control of Pythium blight, or as a treatment after germination to control Pythium damping-off. For retreatment, use the lower rate for the shorter interval and the higher rate for the longer interval within the application rate range. Under severe disease conditions, use the highest recommended rate and shortest interval.

For Control of Pythium Blight and Pythium Damping-off on Turf

TURFGRASS	AREA	RATE	REMARKS
Established Turf and Overseeded Areas	1000 sq ft	1 1/2 to 4 fluid ounces or 2-5 gallons of water	Established Turf: Apply as a preventive treatment during periods of high temperature and humidity favorable to the development of disease. Overseeded Areas: Apply after germination. Retreat at 7-21 day intervals if conditions remain favorable for disease development.

USE PRECAUTIONS: Do not graze or feed clippings from treated areas to livestock. Do not enter treated areas until spray deposit has dried.
