sistent with its labeling.

GENERAL WEED CONTROL

To control most weeds and grasses on non-cropland areas such as rail-
road right-of-ways and industrial sites for an extended time, apply 43.5
gallons per acre of undiluted weed killer after the most predominant
weeds have emerged. No agitation is required.

NOTE: Users should consult State Agricultural Experiment Stations or
Extension Service Weed Specialist for recommendations as to use of
this weed killer in their particular area.

IMPORTANT: Do not apply directly to, or otherwise permit this weed
killer to contact susceptible plants as this product may injure cotton,
beans, peas, grapes, flowers, fruit trees, ornamentals, or other desirable
plants. Avoid spray drift to such susceptible plants (coarse sprays are
less likely to drift). Vapors from this product may injure susceptible
plants in the immediate vicinity. Thoroughly clean spray equipment
with a suitable chemical cleaner before using for other purposes (do
not use same equipment for other purposes). Do not store near ferti-
lizers, seeds, insecticides or fungicides.

Apply any time of year except when the ground is frozen. Best results
are obtained after predominant species are well established in late
spring or early summer. Before treating, calibrate equipment to insure
uniform cover of the area to be treated, measure out the proper
amount and apply. Coarse sprays are less likely to drift.

EQUIPMENT: This weed killer can be applied with railroad on-track,
truck mounted, or other standard spraying equipment. For treating
small areas, tank-type hand sprayers or sprinkling can may be used.

Notice of Warranty: The manufacturer makes no warranties expressed
or implied concerning the use of this product other than those indi-
cated on the label. Purchaser assumes all risk of use and handling of
this material when such use and handling are contrary to label instruc-
tions.
