

[2155-79]

DIRECTIONS FOR USE

Use in food processing plants only when plant is not in operation. Food should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using. Extinguish open flames before space spraying.

1. Flies and Mosquitoes: Close doors and windows. Direct spray towards ceiling and fill entire room with fog. Keep room closed for 10 to 20 minutes. Do not remain in treated areas. Ventilate the area after treatment is completed. Sweep up and destroy fallen insects. Repeat treatment as frequently as required.

2. Cockroaches(waterbugs), Silverfish: Thorough and repeated spraying of the infested area should be done, hitting as many of the insects as possible. Pay particular attention to spraying in cracks, crevices, baseboards, windows, door frames, bookcases, and other hiding places.

3. Fleas Infesting Premises: Can be controlled quickly and effectively by spraying floors and cracks of the infested areas. Fleas lurk in carpets and upholstered furniture. Spray liberally in these areas, as well as in baseboards, wall cracks, and sleeping quarters of animals for direct contact with these pests.

4. Spiders: Spray directly into or on spider webs with as wet a spray as possible. Also spray directly on all visible spiders with a wet spray. Use 1 gallon of this concentrate for each 500,000 cubic feet of space, or wet surfaces thoroughly and treat all infested surface areas, insect hiding places and runways at the rate of 1 gallon to 7,000 square feet.
