

DIRECTIONS

Keep soil moist before treatment. If necessary water lawn prior to application but permit grass to dry before treatment. Do not apply to St. Augustine or Carpetgrass.

CRABGRASS, FOXTAIL AND CHICKWEED—If possible treat when seedlings are small or less than 2 inches tall to get the most effective kill. Two sprays 7 to 10 days apart may be necessary to get good control and follow up sprays to get newly germinated crabgrass or chickweed. On newly seeded lawns do not use until after the third mowing.

Be sure to read entire label and follow directions carefully.

CAUTION. Harmful if swallowed. Avoid contact with skin or prolonged breathing of spray mist. Avoid contamination of feed or foodstuffs. Keep away from children and domestic animals. Keep livestock off treated grass. Wash hands after using.

Keep children and animals off treated areas until after a rain or the next morning.

ANTIDOTE: If taken internally induce vomiting and call a Doctor at once.
