DIRECTIONS

1. REPRODUCTION - ATREID: "Both *Arctostaphylos* and *Chrysothamnus* are capable of producing large areas of new forest by vegetative spread. *Arctostaphylos* is a woody climber and ranges to a height of 15 m. Eggs are deposited singly or in small groups of 2-4 on the underside of leaves or on stems. May, B. is the first period of oviposition. The young hatch 2 weeks after deposition of the eggs and therefore are due to the same age.

After the 1971 election, the Government of India was faced with the task of integrating Assam into the Indian Union. The Government of India had to take steps to ensure that the people of Assam were not discriminated against on the basis of their religion or caste. The Government of India had to take steps to ensure that the people of Assam were not discriminated against on the basis of their religion or caste.

On 24 July 1996, the day after the first day of the strike, the *Washington Post* reported that the American Medical Association (AMA) had agreed to a settlement with the American Hospital Association (AHA) and the American Nurses Association (ANA) to end the strike. The settlement provided for a 3% wage increase for the first year, a 3% increase for the second year, and a 3% increase for the third year. The settlement also provided for a 1% increase in the number of full-time equivalent positions (FTEs) for each hospital. The settlement was a significant victory for the hospitals and the nurses, as it ended the strike and provided for a significant increase in wages and FTEs.

SOD WEBWORM
Granules with
TURF FUNGICIDE

SUPPLEMENTS LAWN DISEASE
CONTROL

Active Ingredients:

Dimethyl (2,2,2-trichloro-1-hydroxyethyl) phosphonate*	6.8%
Zineb (Zinc Ethylene Bisdithiocarbamate)	5.3%
Inert Ingredients	87.9%
TOTAL	100.0%

E.P.A. REG. NO. 2169-208

*U.S. Patent No. 2,701,255

CAUTION

Keep Out Of Reach Of Children

Patterson's

SOD WEBWORM Granules with TURF FUNGICIDE

DIRECTIONS

SOD WEBWORM CONTROL: Sod webworms are capable of destroying large areas of ~~turf~~ turf. They live through the winter as a worm and change to a moth in May. Eggs are deposited very soon throughout the lawn area and new worms hatch in May. By killing this first brood it is possible to reduce the worm populations of later broods and therefore reduce turf damage.

LAWN DISEASES: This product contains a turf fungicide which will aid in suppressing the common lawn diseases, melting out, fading out, rust and slime mold. Since it should be applied at 3 to 4 week intervals for webworm control, additional weekly sprayings with a turf fungicide should be made if a "disease free" lawn is desired. This action is considered a supplement to regular disease control measures.

WHEN TO APPLY: Sod webworm larvae may appear every month from May through August while lawn disease spores are ever present, and attack grass when weather conditions are "right". For this reason, it is wise to plan on at least four applications spaced three to four weeks apart starting approximately May 1st. Apply to the lawn early or late in the day when worms are active. Water the lawn generously after application. Keep children and pets off treated areas until the grass is dry.

HOW TO APPLY: Turf should be free of troublesome thatch which encourages insects and disease. Rake the area and remove the debris to expose insect hiding places. Water the lawn and cut to a height of 2 2/3 inches. Catch the grass clippings if possible. Apply a bag of Patterson's Sod webworm Granules with Turf Fungicide to treat 5,000 sq. ft. Make sure of the square footage. Use a "drop" type spreader such as Patterson's, Greenfield, or Scotts. If "melting out" disease becomes serious, fungicide sprays spaced 7 - 10 days apart may be needed for control during troublesome periods, such as cool nights, warm days, high humidity, lush growth.

CAUTION: May be harmful if swallowed, inhaled or absorbed through the skin. Avoid contact with skin. Do not breathe dust. Wash thoroughly with soap and warm water after handling. Wash any contaminated clothing with soap and hot water before re-use. Do not contaminate feed or food. Keep out of reach of children. If poisoning occurs, obtain prompt medical aid. Prolonged exposure will result in cholinesterase depression. To Physician: Atropine sulfate is antidotal. 2-Pam is also antidotal and may be administered in conjunction with atropine.

Do not graze treated areas. Do not feed clippings to livestock.

Do not reuse container. Destroy when empty.

This product is toxic to fish and wildlife. Birds feeding on treated areas may be killed. Keep out of any body of water. Do not apply when weather conditions favor drift from areas treated. Do not apply where runoff is likely to occur. Do not contaminate water by cleaning equipment, or disposal of wastes. Apply this product only as specified on this label.

NOTICE: Buyer assumes all risk and liability of use, storage, and/or handling of this material not in accordance with the terms of this label.
