H. R. McLane
Patterson Green-Up Company
Div. Curry Cartwright, Inc.
1331 Union Ave.
Kansas City, MO 64101

Dear Mr. McLane:

Subject: Amendment - Updated Formula and Revised Label
72% Chlordane Emulsifiable Concentrate
EPA Registration No. 2169-320
Your Application Dated October 24, 1984

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act, as amended, is acceptable. A stamped copy is enclosed for your records.

The revised formula is also acceptable and has been included in our files.

Sincerely yours,

George T. LaRocca
Product Manager (15)
Insecticide-Rodenticide Branch
Registration Division (TS-767)

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling

SUBTERRANEAN TERMITES — HOMEOWNER USE
MIXING INSTRUCTIONS — Use a 1% water emulsion for Subterranean Termites. Mix 1/2 gallon of this product in 47 quarts of water to produce the 1% solution (8 Fluid Ounces in 1 gallon of water)

TERMITE CONTROL IN EXISTING STRUCTURES

Buildings with Basements or Crawl-Spaces

First remove all wood debris and wood forms. Around piers, pipes, chimney bases and along foundations of poured concrete dig a trench 6 inches wide and 4 inches deep. For brick and block foundations dig the trench about 12 inches deep. If footing is more than 12 inches deep, make holes with a crowbar, pipe or a rod about one foot apart that extend from the trench bottom to the top of the footing. Make holes closer in hard-packed clay soils. NEVER DIG BELOW THE TOP OF THE FOOTING

Apply the emulsion (or solution) in the trench at a rate of 4 gallons per 10 linear feet per foot of depth. Apply half of this to the back-fill. Likewise treat along the inside of foundations of crawl-space buildings. Cover treated soil with a thin layer of untreated soil

For raised porches, terraces, and entrance slabs, drill holes at one foot intervals, 6 inches from the foundation, and pour 1/2 gallon of emulsion (or solution) into each hole. Refill holes. Slabs with heat ducts or radiating heat pipes should be treated by commercial pest control operator

The object is to establish a treated soil barrier which will prevent termite entry. Other critical areas may also require treatment, particularly if there are inaccessible areas, basements or slab-type construction. It is suggested that you contact the Agricultural Cooperative Extension Service for advice or consult a Commercial Pest Control Service

Avoid contamination of public and private water supplies by following these precautions. Do not allow a hose or any type of faucet extension to reach into the termite chemical solution while filling or mixing this material with water. Use anti-back-flow or anti-siphonage equipment on all filling equipment. These devices can be purchased at hardware or plumbing supply stores. Use of anti-back-flow equipment will help to insure that the user of this toxic chemical will not contaminate domestic water supplies. Refer to Federal (Federal Housing Administration), state, and local specifications for safe distances of treatment areas from wells.

...DIRECTIONS FOR USE (Cont.)

Soil in the vicinity of wells, cisterns or ponds should not be treated if it is water saturated, subject to excessive saturation due to an accumulation of water or if the soil to be treated around the perimeter of the structure is at a grade lower than surrounding yard or property area. If this is the situation treat as follows: **Do Not Apply Under Pressure.** Soil should be removed to an area safe from well or domestic water contamination, treated, allowed to stand undisturbed for two to four hours then returned to the trench which has been lined with 4 mil plastic sheeting. Be careful not to puncture the plastic sheeting when returning soil to the trench. Do not treat structures that contain cisterns or wells.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

WARNING: May be fatal if swallowed. Do not get in eyes, on skin, or on clothing. Contact with skin can cause toxic symptoms. Avoid breathing spray mist. In case of contact with skin wash with plenty of soap and water. Wash thoroughly after handling and before smoking or eating.

A committee of the National Academy of Sciences has stated that "There are no adequate data to show that these compounds are carcinogenic in humans, but because of their carcinogenicity in certain mouse strains and the extensive similarity of the carcinogenic action of chemicals in animals and humans, the committee concluded that Chlordane, Heptachlor, and/or their metabolites may be carcinogenic in humans."

ENVIRONMENTAL HAZARDS

This product is toxic to fish, birds, and other wildlife. Keep out of any body of water. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.

PHYSICAL OF CHEMICAL HAZARDS

Do not use pour spill or store near heat or open flame

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal. Do not re-use empty container. Wrap container and put in trash collection.

NOTICE: Buyer assumes all risk and liability of use, storage and/or handling of this material not in accordance with the terms of this label.
