PARA-DI-CHLOROBENZENE

1/2" Wax Moth Crystals

Active Ingredients	Para-dichlorobenzene	99.3%	This container contains
Inert Ingredients		0.7%	
		100.0%	Net Wt. _____

Less than 25 pound containers repacked by A. G. Woodman Co., Grand Rapids, Michigan 49501.
Larger than 25 pound containers as purchased.

**To be used for empty extracted, extracting combs when in storage.
Sold only for the purpose of controlling Bee or Wax Moth.**

**Caution — Do not use for Comb Honey—Cut COMB HONEY — OR COMBS
OF EXTRACTED HONEY THAT HAVE NOT BEEN EXTRACTED.**

DIRECTIONS: Supers of extracting combs should be stacked as tightly as possible. Well to set on several layers of newspapers to make tight seal at bottom. No more than 5 or 6 full depth supers or 10 shallow supers in a stack. The gas given off is heavier than air and settles to the bottom. Place a small piece of cardboard on top of the frames in the top super. Deposit three ounces (3) of crystals and then cover stack. Check every two or three weeks and add more crystals if gone. At temperatures of 45 degrees and less, little chance of larva activity. Over this do not fail to check.

Para-dichlorobenzene does not kill the moth eggs, but will kill the moth larva and young larva after it hatches.

Send for U.S.D.A. Farmers Bulletin No. 2217, U. S. Government Printing Office, Washington, D. C. 20402
for additional directions on its use. 1967 revisions.

WARNING—Avoid direct and prolonged breathing of its fumes. If taken internally or any unpleasant effects, seek medical help at once.
