GORDON'S NET CONTENTS ONE GALLON

**PYRENONE
SPRAY**

DIRECTIONS FOR APPLYING

Fog For Flying Insects

Use a good steam, compressed air or fog generator to dispense Pyrenone Spray into atmosphere as a fine mist. For house flies, mosquitoes and gnats in food processing establishments, or Indian Meal Moth and Angoumois Moth in grain storage or processing plants, use at the rate of 2 to 3 ounces per 1,000 cubic feet (1 gallon per 40,000 cubic feet). Doors, windows and outside ventilators must be closed to contain mist for 20 to 30 minutes. Repeat treatment as needed. Remove animals or pets during operation.

For Crawling Insects

Such as roaches, best results are obtained by using a coarse mist spray, applying freely. This is a contact spray so best results are obtained when insects are hit by it. Thoroughly spray all cracks and crevices where the insects could hide, particularly in areas where plumbing is installed.

Food Processing Plants

Use the product as a spacespray in food processing plants only when plant is not in operation. Foods should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using.

Caution

Avoid breathing fog or spray mist. Turn off electrical equipment and extinguish open flames before proceeding with fogging operation. Store in a cool place. Harmful if swallowed.

DIRECTIONS FOR APPLYING

Stored Grains

Make a light spray application—2 gallons to 1,000 square feet—directly to the grain surface to control Indian Meal Moth, Angoumois Moth and other grain infesting insects that are feeding on or near the surface of the grain. Make one or more applications, as needed throughout the storage period.

Mill and Processing Areas

Spray areas such as body as well as boots, aprons, etc. in any place where grain is handled. Follow good housekeeping practices. Use heavy-duty vacuum cleaners, and then thoroughly spray floors. Planned applications may be necessary between fumigations and grain surface insect infestations, such as Grain Weevil, Indian Meal Moth, Ground Flour Beetle.

Grain Storage Bins

Thoroughly spray webbing and break it up if possible. Empty bins should be thoroughly sprayed with our Mill and Farm Bin Spray before storing grain. Particular attention should be given to killing insects in farm bins.

NOTICE. Seller warrants that this product conforms to the ingredient statement on the label. Since conditions of use, such as weather, compatibility with other chemicals, and condition of application equipment, will vary, Seller makes no claims other than those stated on this label.
