JUL 26 1967
 UNDER THE FEDERAL INSECTICIDE
 FUNGICIDE AND RODENTICIDE ACT
 FOR ECONOMIC POISON REGISTERED
 UNDER NO. 2017-350 SUBJECT
 TO ATTACHED COMMENTS.

DIRECTIONS FOR USE

This product is highly concentrated and must be diluted before use. Thoroughly mix one quart in 4 3/4 gallons of diesel fuel or kerosene to total 5 gallons of solution. Initially charge the backrubber with enough solution to saturate the treating surface but not to the point of run-off. Also, fill special reservoirs. With manual charging backrubbers, reapply solution every two weeks during fly season. As the backrubber is utilized by the cattle, there will be an immediate reduction of flies and a reduction in lice will be evident in 6 weeks.

Make the backrubber accessible to beef cattle only around loading sheds, feed lots or on range near salt lick where cattle may congregate. Rub-Tox 68 will not freeze out on the range. Do not allow dairy cattle or calves under three months of age to treat themselves.
