LAWNS, GOLF COURSES AND SIMILAR TURF AREAS

Best results are secured when treatment is made in Fall or Spring, when weeds are actively growing. For best results on thistles, treat when in the early bud stage.

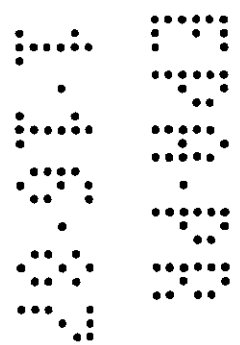

Do not apply to newly seeded lawns until grass has become well established.

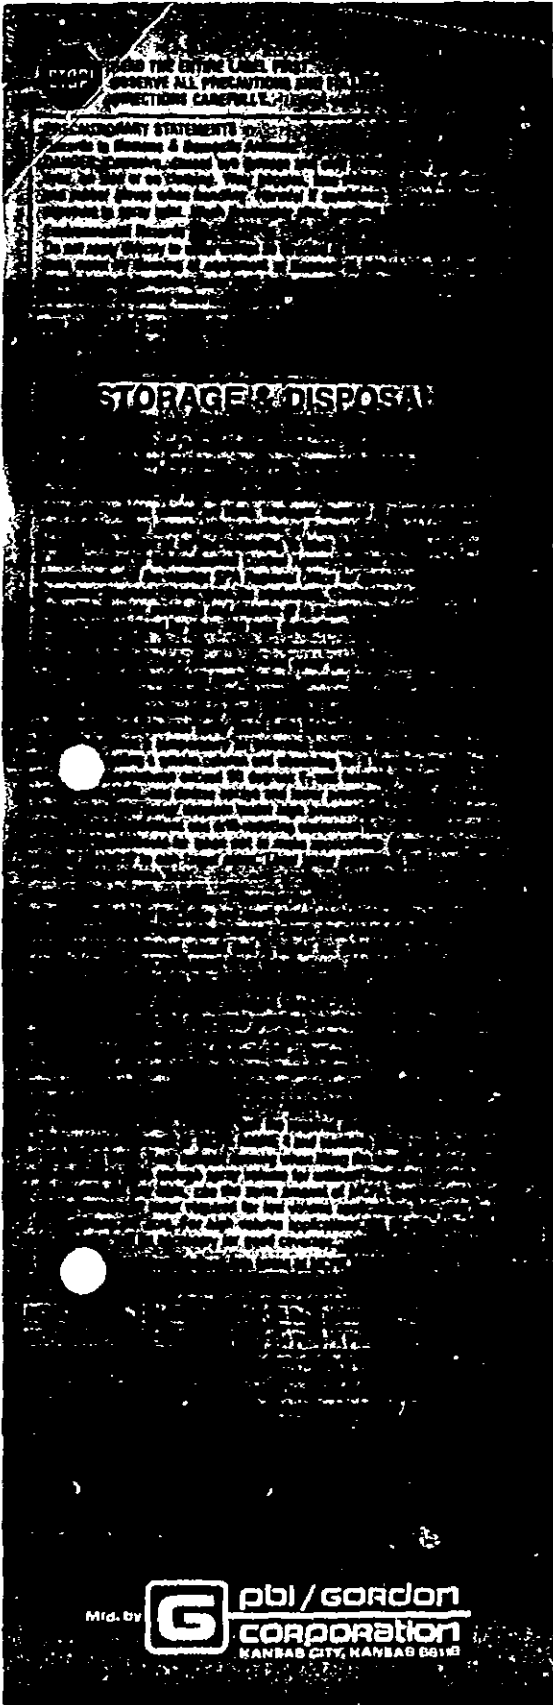

NOTE: White clover is susceptible to injury. Also in some areas, Bentgrass, Carpet and St. Augustine are susceptible to injury.

SMALL AREAS: Use 3 tablespoons in 3 to 5 gallons of water and apply evenly over 1000 square feet of area.

LARGE AREAS: Use 1 - 4 pints per acre in 10 to 100 gallons of water to give thorough coverage.
