

**GORDON'S**

# weeder granules

ACCEPTED  
Jan 27-1973  
FEDERAL INSECTICIDE ACT  
SUBJECT: WEEDER GRANULES  
EPA REG. NO. 480

Do not use on ground cover as injury may occur. \*\*Gladiolus corms less than 1 inch in diameter may be injured.

**DIRECTIONS FOR MIXING INTO SOIL:** Apply WEEDER GRANULES to established trees, ornamentals, roses and flowers that are 2 to 3 inches or more in height. Apply uniformly at the recommended rate. The rate of application varies with soil type. Use the table below to determine the proper rate for your type soil. Mix into the soil surface with hand rake being careful not to disturb the roots of established plants. Shallow cultivation during the growing season will not reduce effectiveness when WEEDER GRANULES have been adequately mixed into the soil. When it is not possible to mix Weeder Granules into the soil surface, they should be spread on the surface at the rate of 1 pound per 160 square feet and water thoroughly. When applied at this rate, do not mix into soil. Remove all existing grasses and weeds prior to application since WEEDER GRANULES control weeds from seed only.

**APPLICATION CHART — ORNAMENTALS**

Soil Type	Rate of Application:	
Light Sandy	1 lb. to 1,280 sq. ft.	1 cup to 320 sq. ft.
Medium Loam	1 lb. to 960 sq. ft.	1 cup to 240 sq. ft.
Heavy silt or clay	1 lb. to 640 sq. ft.	1 cup to 160 sq. ft.
