USES:

GORDON'S WEEDER GRANULES provides long-lasting control of many annual grasses and broadleaf weeds. It kills the weed seeds as they germinate in the soil. Therefore, to be effective, the product must be applied to the soil and mixed into the top 1 to 3 inches of soil. Since **WEEDER GRANULES** mostly attacks germinating seeds, any existing weeds should be removed.

Application to Ornamental Trees, Shrubs and Flowers: In addition to roses and other flowering shrubs, **WEEDER GRANULES** can be applied under the following established flowers:

Directions for Mixing into Soil: Apply WEEDER GRANULES to established trees, ornamentals, roses and flowers that are 2 to 3 inches or more in height. Apply uniformly at the recommended rate. The rate of application varies with soil type. Mix into the soil surface with hand rake being careful not to disturb the roots of established plants. Shallow cultivation during the growing season will not reduce effectiveness when WEEDER GRANULES have been adequately mixed into the soil. When it is not possible to mix WEEDER GRANULES into the soil surface, they should be spread on the surface at the rate of 1 pound per 160 sq.ft. and water thoroughly. When applied at this rate, do not mix into the soil. Remove all existing grasses and weeds prior to application since WEEDER GRANULES controls weeds from seed only.
