**WHEN TO USE:**

1. Spray at any time during the growing season when weeds are actively growing.
2. On new lawns, wait until the grass has reached a height of 2 inches before making an overall spray treatment. Spot spraying may be made at any time with a small pressure sprayer. Wait 3 weeks before seeding or planting stolons, plugs, or sprigs.
3. Poor weed control may result if spray is applied during drought or just before rain.
4. Do not water lawn within 24 hours after treatment.

**HOW MUCH TO USE:**

The maximum application rate to turf is 1.0 pound 2,4-D acid equivalent per acre per application per site. The maximum number of broadcast applications per treatment site is 2 per year. Example Mix 1 fluid ounce of product (2 tablespoons) in 1 gallon of water and apply on 300 square feet in the spring for sensitive weeds. For larger or more dense weeds stands, apply 1 fluid ounce of product on 200 square feet. Follow the rate charts below.

4/4

**Hose End Sprayer:**

Use a hose-end sprayer designed for lawns. Put recommended amount of product in bottle and add water to proper level and spray on area indicated. For example to spray 3,000 square feet measure 10 fluid ounces of product (20 tablespoons) in jar and add water to the 10 gallon mark and mix. Turn on hose and spray as evenly as possible over 3,000 square feet.

Amount Lawn Weed Killer to Use:		Fill Bottle to	Area to Treat
(Tablespoons)	(Fluid Ounces)	(Gallons)	(Square Feet)
2	1	1	300
4	2	2	600
10	5	5	1500
20	10	10	3000
32	16	16	4800

**Pressure Sprayers:**

Measure indicated amount of product into tank and dilute with water according to the following chart. Use a spray pattern that gives small spray droplets without any fine mist, and cover the area indicated.

Amount of Lawn Weed Killer to Use:		Amount of water in sprayer	Area to be sprayed
(Tablespoons)	(Fluid Ounces)	(Gallons)	(Square Feet)
4	2	1/2	600
8	4	1	1200
16	8	2	2400
24	12	3	3600

**Spot Spraying:**

To spray small areas or individual weeds, do not use a hose-end sprayer. Mix 2 fluid ounces (4 tablespoons) in 1/2 gallon of water in a pressure sprayer, and spray as required, being certain to wet each weed.

NOTE: Whether using a hose-end sprayer or pressure sprayer, avoid sprays which are too fine because they can drift and damage ornamental or garden plants.
