WHERE TO USE: BL 8000 Lawn Weed Killer may be used on Bluegrass, Bermuda or Zoysia lawns, on playgrounds and other similar areas where hard to kill weeds are present. This product is especially effective on all types of hard to kill weeds such as SOBBLE, CRACKED FROSTWEED, SPOTTED SPURGE, OXALIS, BLACK MEDIC, and SHEEP SOFTWEED. In addition to these BL 8000 Lawn Weed Killer controls most other broadleaved lawn weeds, including Dandelion and Plantain. A partial list is given on the side panel.

NOTE: Do not allow spray to get on vegetables or ornamental plants as injury may result. Some injury can be expected when used on Centipede or St. Augustine grass lawns. Select Spray weeds only. Clover prevent may be damaged if sprayed. Repeat if necessary on hard to kill weeds. Whether using a Disk-end sprayer or pressure sprayer, avoid spray on hard to kill weeds because they can drift and damage ornamental or garden plants.

WHEN TO USE: Spray at any time during the growing season when weeds are actively growing. Treat Chickweed, Henbit, Wild Onion and Garlic in the fall or in the spring, as needed. On new lawns wait until the turf has reached a height of 2 inches before making an overall spray treatment. "Spot Spray" weed treatment, however, may be made at any time with a small pressure sprayer, spraying only the weeds at ground level. Wait 3 weeks before putting new grass seed or stolons down in the bare spots. Poor weed control may result if spray is applied during drought or just before rain. For best results mow before treating. Do not water lawn within 24 hours after treatment.

HOSE-END SPRAYER: Use a hose-end sprayer designed for lawns. Put recommended amount of chemical (Column 1) in bottle and add water to indicated level (Column 2), and spray on area indicated. For example, to spray 2,500 sq. feet, measure 10 ozs. 20 tbsp. in jar and add water to the 10 grains level and mix. Turn on hose and spray as evenly as possible over 2,500 sq. feet.

Col. 1	Col. 2	Col. 3
Lawrence Wheat Killer Bottle F Oz	Full Bottle To (Gallons,	Amount In at Sec Feet
25	5	1250
20	10	2500
30	15	3750
40	20	5000

PRESSURE SPRAYERS Measure indicated amount of chemical into tank and dilute with water according to the following chart. Use a spray pattern which gives small spray droplets without any fine mist and cover the area indicated.

How much to use: FOLI SPRAY
To spray small areas or individual weeds, do not use hose end sprayers. Mix 1 oz. of this in 12 gal. water in pressure sprayer and spray as required being certain to wet each weed.

CAUTION: Handle with care. Avoid contact with skin. If contact occurs, wash immediately with plenty of water. Do not use in areas where food is prepared.
