In addition to the 23-3-7- fertilizer, this product contains TRIMEC *Turf Herbicide. The fertilizer supplies a portion of the plant food needed for normal season's growth and the herbicide controls hard to-kill weeds such as chickweed, black medic, ground ivy, knotweed, plantain, dandelions, spurge, and most other common lawn weeds. If adverse low moisture conditions prevail and weeds are in a state of poor growth, possible retreatment may be necessary with a TRIMEC *liquid formulation when conditions improve.

WHEN TO APPLY: For best results apply when weeds are growing vigorously in the spring or early fall after heavy rains.

The product may be used on bluegrass, fescue, perennial ryegrass, bermudagrass and zoysiagrass. WEED-'N-FEED 6 is an effective lawn food which combines the advantages of fertilization plus the broad range of weed control of the TRIMEC[®]. Weeds contacted by the product stop growing, gradually die, and disappear from the lawn.

HOW MUCH TO USE: This 20 lb. bag of WEED-'N-FEED 6 should be used on 5,000 sq. ft. Apply evenly with a lawn spreader either as a one pass application or a two pass application by crisscrossing the area at one-half the rate.

To get maximum weed killing results, do not rake, mow, or water the lawn for at least 24 hours after spreading the product.

Lawns which are heavily overrun by weeds and are in poor condition may require more than one application of this product. A suggested second application could be made in approximately 30 days.

The maximum application rate to turf is 1.5 pounds 2,4-D acid equivalent per acre per application per site. The maximum number of broadcast applications per treatment site is 2 per year.

SPREADER SETTINGS

The above spreader settings are approximate. Calibrate your spreader on 250 sq. ft. and adjust to apply 1.0 lb. of product per 250 sq. ft.
