A spray especially designed for use around food plants where food products may be handled, prepared or stored. Foods should be removed or covered during treatment. All food processing surfaces should be covered during treatment or thoroughly cleaned before using. When using the product in these areas, apply only

when the facility is not in operation. This spray when applied as directed will aid in the control of exposed stages of confused flour beetles, cadelle, flat grain beetle, meal worms, dermestids, roaches, silverfish, Mediterranean flour moth and Indian meal moth.

The contact spray will give better control on stored product insects than the space spray.

Contaminated foodstuffs should be discarded or fumigated. Good sanitation is an important part of stored product insect control.

Do not remain in treated areas. Ventilate the area after treatment is completed.

FOR CONTACT SPRAY: For aid in the control of Roaches and Silverfish. Apply this spray as is, or diluted 1 gallon of Gordon's Industrial Spray to 1 1/2 gallons of deodorized spray oil, directly to floors, walls, and other areas requiring treatment. Particular attention should be given to cracks, crevices and other hiding places. For best results apply spray direct to insects.

Food should be protected during treatment. Food processing equipment should be protected and thoroughly cleaned before re-use.

FOR SPACE SPRAY: Dilute 1 gallon of Gordon's Industrial Spray with 1 1/2 gallons of deodorized base oil and apply as fog or space spray using 1 gallon per 40,000 cubic feet (3 ounces in 1,000 cubic feet) for the control of houseflies, mosquitoes, and gnats.
