#### **GENERAL INFORMATION:**

Gordon's Crabgrass & Nutgrass Killer contains MSMA and provides selective weed control in established bluegrass, zoysiagrass and bermudagrass lawns.

#### WEEDS CONTROLLED:

*Grassy Weeds* – [Smooth and Large] Crabgrass, Dallisgrass, Sandbur, Goosegrass, Barnyardgrass, Johnsongrass and Brachiaria *spp*.

Sedges - Nutgrass (Yellow Nutsedge)

Broadleaf Weeds - Cocklebur, Puncturevine, Chickweed, Oxalis (Wood Sorrel) and Pigweed.

#### USE PRECAUTIONS:

- Do not use on newly seeded lawns until after the third mowing.
- Do not use on St. Augustinegrass, centipedegrass, or bahiagrass. This product may injure fescue, bentgrass, and carpetgrass.
- Keep children and domestic animals off treated area until this material has been watered into the soil and grass is dry.
- Do not use a hose end sprayer.
- Do not use high sprayer pressure since fine droplets could be formed which might drift to nearby sensitive plants.

#### ABOUT NUTGRASS (NUTSEDGE) [Yellow Nutsedge]:

Nutgrass [yellow nutsedge] grows from seed and small nut-like tubers on the roots. Unless controlled, nutgrass [yellow nutsedge] will spread rapidly. Look for grass-like, but triangular yellowish green leaves growing upright above the lawn grass. Make application promptly to prevent seed and tuber formation. Treat only infested areas since some temporary yellowing of the lawn grass may occur. Where only a few nutgrass [yellow nutsedge] plants are found, place 2 or 3 drops of undiluted chemical [herbicide] directly in the crown of the plant (an eye dropper or small spoon may be used) and retreat in 10 to 14 days.

#### WHEN & HOW TO APPLY:

Apply anytime when temperatures are above 75°F. Apply when weeds are small and are easier to kill than larger, mature plants. Determine average size of growth of plants to be treated and make dilutions as given in the [dilution] tables. On new lawns, wait until after the third mowing before treating. Be sure soil is moist and lawn healthy before treating. During drought, water grass well several days in advance and restore turf to healthy green color with fertilizer before treating. Treat only infested areas since some temporary yellowing of the lawn grass may occur. If directions are followed, turfgrass will quickly return to normal. Repeat applications may be necessary if new growth appears. Use hand-operated sprayers (plunger or pump-up sprayer).

- 1. Keep lawn mowed about 1½ to 2 inches during treatment.
- 2. Water lawn well before treatment.
- 3. Set sprayer wand at low pressure for coarse spray droplets.
- 4. Apply uniformly over the areas to be treated.
- 5. Flush out sprayer with clean water.
- 6. Repeat treatments as needed. A second application of this product may be necessary 10 14 days later for dense weed populations, mature crabgrass and dallisgrass.
- 7. Optimum results may not be obtained if rainfall or watering occurs within 24 hours after application,
