BEFORE APPLICATION:

- Remove existing weeds.
- Thoroughly work and smooth the area to be treated.
- Carefully measure area to be treated and determine the number of square feet.

NOTE: If area to be treated is large, it should be divided into smaller sections, and each treated individually.

APPLICATION AND RATE: Shake granules uniformly on the soil at the rate of 3/4 ounce (3 level tablespoons) for each 10 square feet to be treated. The 20 ounce shaker package treats 270 square feet, the 5 pound bag treats 1,080 square feet. As a guide for proper distribution of granules, consult the following diagram.

- Rates higher than those indicated may cause injury.
- More accurate and uniform application can be obtained by applying one-half of the required material over the entire treatment area and repeating the application with the remaining material.
- This product should not be used on sloping areas, as runoff may result in injury to lawn or other plants in adjacent areas.

AFTER APPLICATION

- Unless the soil is wet, sprinkle lightly to moisten the soil 1/4 to 1/2 inch deep. Do not flood, avoid puddling and washing.
- Avoid disturbing soil in the treated area as long as weed control is being maintained.

**(FOR SPRED-RITE® GRAVITY-FLOW
APPLICATOR/CONTAINER ONLY)**

HOW TO ASSEMBLE THE SPRED-RITE® GRAVITY-FLOW APPLICATOR

Instructions for assembly of spreader:

1. Illustration of Spreader, Tube Deflector
2. Illustration of Slide Tube Through Cap
3. Place Disk in Cap
4. Secure Cap onto Spreader
5. Attach Deflector to Tube

(DIAGRAM)

DIRECTIONS FOR USE:

1. To start the flow of granules: Tilt the spreader down until granules flow through the tube and across the deflector.
2. To start the granule flow: Tilt the spreader back toward the upright position.
3. Use the "B" disc for most applications and return the solid disc to the cap for storing after use. The "A" disc will slow down the rate of granular delivery and should be used only for applications to cracks and other very narrow areas. When used in this manner the deflector head should be removed entirely.

IMPORTANT: Do not use without either orifice disc since this will result in an extremely rapid flow of granules that may cause over application and risk of damage to desirable plantings or result in waste of the product.

4. To adjust the width of the band of granules: Hold the deflector close to the ground to produce a narrow band. As the deflector is raised, the band applied will widen. The spreader will apply a band of granules 30 to 36 inches wide when the deflector is held about 3 feet above the ground. By turning the deflector sideways, a 2 to 4 inch band will result.
5. Side delivery of granules: The operator can direct the granules out to the side and under hedges, bleachers, guard rails, etc. while walking straight ahead. Hold spreader parallel to the body, but with deflector positioned sideways.
6. The amount of granules applied will depend on the orifice disk used and the speed the person walks while making the application.

Refer to the rate diagrams for the pattern of granules for the various recommended rates. These patterns should be duplicated as nearly as possible for best results.
