ORNAMENTAL LAWNS & TURF  
(other than Bentgrass)

Apply DMDP 897 at a rate of 3 pints per acre in sufficient water for good coverage (40-80 gallons of water per acre or 1-2 gallons of water per 1000 sqft. is normal). Maximum kill of weeds will be obtained from spring or early fall application when weeds are actively growing. Avoid applying during long excessively dry or hot periods unless adequate irrigation is available. Do not mow within two days before or after application.

Controlled Droplet Applicator:

Reduced rates of DMDP 897 must be used when grass is stressed from heat, drought, etc. Add 2 pints of DMDP 897 to the herbicide container then fill with 3 pints of water, keeping container agitated. Spray entire contents over 33,000 (about 3/4 acre). Do not overlap between spray patterns.

BENTGRASS TURF

Apply DMDP 897 at a maximum rate of 1/2 ounce per 1,000 square feet in spring or early fall when weeds are actively growing. Avoid overdosing Bentgrass or injury may result. Increasing the volume of spraywater to 3 gallons per 1,000 square feet will help avoid localized application which may result in turf injury. Do not mow within two days before or after application.
