

JUN 9 1995

Mr. James A. Armbruster, Ph.D.
 PBI/Gordon Corporation
 1217 West 12th Street
 P.O. Box 4090
 Kansas City, Missouri 64101-1407

Dear Dr. Armbruster:

SUBJECT: Label Amendments:

- Trimec 937 Herbicide (EPA Reg. No. 2217-758)
- Gordon's Brush Killer 801 (EPA Reg. No. 2217-648)
- Trimec 800 Herbicide (EPA Reg. No. 2217-651)
- EH 1068 Trimec Ester (EPA Reg. No. 2217-774)

Your Applications Dated May 8, 1995, Requesting to Revise the Oral Statements of Practical Treatment.

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable provided changes are made to the subject product labels, as specified below:

I. Trimec 937 Herbicide (2217-758):

1. The statement, "Contains Petroleum Distillates", must be added as a footnote to the Ingredient Statement.
2. The Clothing Requirements and Personal Hygiene statements for "Ornamental Lawns & Turf" are correct, but should be moved from the Directions for Use section to the Precautionary Statements section of the label and placed under a heading indicating that these statements apply to turf sites only.
3. The Clothing Requirements and Personal Hygiene statements that are currently located in the Precautionary Statements section (paragraphs 2 & 3) should be placed under a heading indicating that these statements apply to industrial sites only and should be revised as follows:

RD:STANTON:PM Team 23:Rm. 235:305-5218:Disk #1:S487521.LET

CONCURRENCES								
SYMBOL ▶	7505C							
SURNAME ▶	S. Stanton							
DATE ▶	Jun 9, 1995							

-The phrase "or repairing or cleaning equipment used with this product" must be added after "When mixing, loading, or applying this product" in the first sentence of the Clothing Requirement Statements.

-The Personal Hygiene Statements should be revised to read:

"Wash hands, face and arms with soap and water as soon as possible after mixing, loading, or applying this product. Wash hands, face and arms with soap and water before eating, smoking, or drinking. Wash hands and arms before using toilet. After work, remove all clothing and shower using soap and water. Do not reuse clothing worn during the previous day's mixing and loading or application of this product without cleaning first. Clothing must be kept and washed separately from other household laundry. Remove saturated clothing as soon as possible and shower."

4. The first paragraph of the Hazards to Humans & Domestic Animals section should be revised by moving the sentence that begins "If spills occur ..." to the Environmental Hazards section of the label and correcting the second-to-last sentence to read: "Harmful if swallowed, inhaled or absorbed through skin."

5. The Statement of Practical Treatment section should be revised as follows:

-The sentence "Get medical attention." should be added to the dermal exposure statement.

-The following inhalation exposure statement must be added:

"If Inhaled: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention."

II. Gordon's Brushkiller 801 (2217-648):

1. The statement, "Contains Petroleum Distillates", must be added as a footnote to the Ingredient Statement.

2. The first paragraph of the Hazards to Humans & Domestic Animals section should be revised as follows:

-The sentence that begins "If spills occur ..." should be moved to the Environmental Hazards section of the label.

-The remainder of the paragraph must be revised to read:

"WARNING: Causes substantial but temporary eye injury. Harmful if swallowed, inhaled or absorbed through skin. Do

not get in eyes, on skin, or on clothing. Avoid breathing vapor."

- 3. The Statement of Practical Treatment section should be revised as follows:

- The sentence "Get medical attention." should be added to the dermal exposure statement.

- The following inhalation exposure statement must be added:

"If Inhaled: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention."

III. Trimec 800 Herbicide (2217-651):

- 1. The statement, "Contains Petroleum Distillates", must be added as a footnote to the Ingredient Statement.
- 2. The Clothing Requirements and Personal Hygiene statements for "Industrial Sites" are correct, but should be moved from the Directions for Use section to the Precautionary Statements section of the label and placed under a heading indicating that these statements apply to Industrial sites only.
- 3. The Clothing Requirements and Personal Hygiene statements that are currently located in the Precautionary Statements section (paragraph 2) should be placed under a heading indicating that these statements apply to Turf sites only.
- 4. The last sentence of the Hazards to Humans & Domestic Animals section, that begins "If spills occur ...", should be moved to the Environmental Hazards section of the label.
- 5. The first paragraph of the Hazards to Humans & Domestic Animals section should be revised to read as follows:

"CAUTION: Harmful if swallowed, inhaled or absorbed through skin. Causes moderate eye injury. Avoid contact with skin, eyes, or clothing. Avoid breathing vapor."

- 6. The Statement of Practical Treatment section should be revised as follows:

- The ocular statement should read: "If In Eyes: Flush eyes with plenty of water. Call a physician if irritation persists."

- The sentence "Get medical attention." should be added to the dermal exposure statement.

-The following inhalation exposure statement must be added:

"If Inhaled: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention."

IV. EH 1068 Trimec Ester (2217-774):

- 1. The Clothing Requirements and Personal Hygiene statements for "Ornamental Lawns & Turf" are correct under both Option I and Option II, but should be moved from the Directions for Use section to the Precautionary Statements section of the label and placed under a heading indicating that these statements apply to turf sites only.
- 2. The Clothing Requirements and Personal Hygiene statements that are currently located in the Precautionary Statements section (paragraphs 2 & 3) should be placed under a heading indicating that these statements apply to industrial sites only and should be revised as follows:

-The phrase "or repairing or cleaning equipment used with this product" must be added after "When mixing, loading, or applying this product" in the first sentence of the Clothing Requirement Statements.

-The Personal Hygiene Statements should be revised to read:

"Wash hands, face and arms with soap and water as soon as possible after mixing, loading, or applying this product. Wash hands, face and arms with soap and water before eating, smoking, or drinking. Wash hands and arms before using toilet. After work, remove all clothing and shower using soap and water. Do not reuse clothing worn during the previous day's mixing and loading or application of this product without cleaning first. Clothing must be kept and washed separately from other household laundry. Remove saturated clothing as soon as possible and shower."

- 3. The following ocular exposure statement must be added to the Statement of Practical Treatment section:

"If In Eyes: Flush with plenty of water. Call a physician if irritation persists."

- 4. The WPS exclusionary statement for "Ornamental Lawns and Turf" is incorrect under both Options I and II and should be revised to read:

"Not for use on turf being grown for sale or other commercial use as sod, or for commercial seed production, or for research purposes."

TRIMEC® 937 HERBICIDE

A Brush Killer & Broadleaf Weed Herbicide

[FOR BROADLEAF WEED CONTROL IN TURF]

[One Gallon Covers Up To 4 Acres. - 8 Ounces Covers Up to 11,000 Square Feet]

Controls Ash, Aspen, Brambles, Kudzu, Oak, Willows, Dandelion, Chickweed, Knotweed, Plantains, Henbit, Spurge and many other species of brush and broadleaf weeds including those listed on this label.

ACTIVE INGREDIENTS

* Isooctyl (2-ethylhexyl) ester of 2,4-Dichlorophenoxyacetic acid.....	32.45%
** Isooctyl ester of 2-(2,4-Dichlorophenoxy) propionic acid	31.80%
*** Dicamba: 3,6-dichloro-o-anisic acid	5.38%
INERT INGREDIENTS.....	<u>30.37%</u>
TOTAL 100.00%	

This product contains:

- ~2.0 lbs. 2,4-Dichlorophenoxyacetic acid equivalent per gallon or 21.54%
- ~2.0 lbs. 2-(2,4-Dichlorophenoxy) propionic acid equivalent per gallon or 21.54%
- ~0.5 lb. 3,6-dichloro-o-anisic acid equivalent per gallon or 5.38%

Isomer Specific by AOAC Method

STOP! READ THE ENTIRE LABEL FIRST. OBSERVE ALL PRECAUTIONS AND FOLLOW DIRECTIONS CAREFULLY.

PRECAUTIONARY STATEMENTS

Hazards to Humans & Domestic Animals

WARNING: Causes substantial but temporary eye injury. Wear goggles, face shield, or safety glasses when handling. If spills occur, collect the material and dispose of by following disposal instructions on this label. Do not get in eyes, on skin or on clothing. If eye exposure occurs, flush with water and get immediate medical attention. Harmful if swallowed. Avoid breathing vapor.

Clothing Requirement Statements: When mixing, loading, or applying this product, wear long-sleeved shirt, long pants, socks, shoes, chemical-resistant gloves and eye protection. It is recommended that safety glasses include front, brow and temple protection. For aerial applicators in an enclosed cockpit and applicators applying this product from a tractor that has a completely enclosed cab, eye protection is not required.

Personal Hygiene Statements: After using this product, rinse gloves before removing, remove clothing and launder separately before reuse, and promptly and thoroughly wash hands and exposed skin with soap and water. Remove saturated clothing as soon as possible and shower.

Containers over 1 gallon and less than 5 gallons: Persons engaged in open pouring of this product must also wear coveralls or a chemical resistant apron.

Containers of 5 gallons or more: A mechanical system (probe and pump) must be used for transferring the contents of this container. If the contents of a non-refillable pesticide container are emptied, the probe must be rinsed before removal.

Statement of Practical Treatment

In case of contact in eyes: Flush with water for 15 minutes and get immediate medical attention.

In case of contact with skin: Wash with plenty of soap and water.

If Swallowed: Call a physician or Poison Control Center immediately. Contains petroleum solvent. Do not induce vomiting because of danger of aspirating liquid into lungs, causing serious damage and chemical pneumonia. If spontaneous vomiting occurs, keep head below hips to prevent aspiration, and monitor for breathing difficulty.

ENVIRONMENTAL HAZARDS: This product is toxic to aquatic invertebrates. Drift or runoff may adversely affect aquatic invertebrates and nontarget plants. For terrestrial uses, do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. When cleaning equipment, do not pour the washwater on the ground; spray or drain over a large area away from wells and other water sources. Do not apply when weather conditions favor drift from target area.

Most cases of groundwater contamination involving phenoxy herbicides such as 2,4-D and 2,4-DP have been associated with mixing/loading and disposal sites. Caution should be exercised when handling 2,4-D and 2,4-DP pesticides at such sites to prevent contamination of groundwater supplies. Use of closed systems for mixing or transferring this pesticide will reduce the probability of spills. Placement of the mixing/loading equipment on an impervious pad to contain spills will help prevent groundwater contamination.

Physical or Chemical Hazard: Do not use or store near heat or open flame.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling

STORAGE & DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

STORAGE: Keep from freezing. Store in original container in a locked storage area inaccessible to children and pets.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law and may contaminate groundwater. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned stay out of smoke.

ROADSIDES, DRAINAGE DITCHBANKS, RIGHT-OF-WAYS, RAILROADS, FIRE-BREAKS, FENCE-ROWS, INDUSTRIAL SITES & OTHER SIMILAR NON-CROP AREAS

INSTRUCTIONS: To effectively control brush, all leaves, stems and suckers should be thoroughly wetted to the ground. Apply when plants come into full leaf (spring) until plants begin to go dormant. Best results are obtained when brush and broadleaf weeds are young and actively growing. Do not cut brush until the herbicide has translocated throughout the plant causing root death.

USE PRECAUTIONS: Do not apply this product through any type of irrigation system. Avoid spray drift to cotton, soybeans, tomatoes, tobacco, grapes, fruit trees, flowers, or garden crops and all other hormone herbicide-sensitive desirable plants. Do not apply near sensitive plants since small quantities of wind-drift herbicides may cause severe injury. Do not apply herbicide when wind speed is sufficient to cause drift. Do not apply herbicide when a temperature air inversion exists. An air inversion may be detected by creating a smoke column and observing a layering effect. Do not apply when temperature exceeds 85°F and humidity is high. To aid in avoiding spray drift, use coarse sprays and low pressure. Do not use nozzles which produce fine spray droplets under high pressure. The use of thickening agents or anti-drift additives and drift-reducing equipment are of value in preventing spray drift. Care should be taken not to make applications where runoff could carry the chemical to food crops or grazing lands where cattle, sheep, goats, swine or poultry would be exposed.

SPRAY PREPARATION AND TANK-MIXTURES

Water Spray: Add one-half the required amount of water to the spray tank, then add Trimec 937 Herbicide slowly with agitation, and complete filling the tank with water. To prevent separation of the emulsion, mix thoroughly and continue agitation while spraying.

Full Oil Spray: Use diesel oil, No. 1 or No. 2 fuel oil, kerosene, mineral oil, or basal oils. Add one-half the required amount of oil to the spray tank, then add Trimec 937 Herbicide with agitation and complete filling the tank with oil. Mix thoroughly and provide adequate agitation during mixing and spraying.

Tank-Mixing with Garlon® 4 Herbicide: Trimec 937 Herbicide can be mixed with Garlon 4 Herbicide for use in roadsides, right-of-ways, railroads, fencerows, industrial sites and other similar non-crop areas. Garlon 4 Herbicide is a butoxyethylester formulation containing 4.0 pounds per gallon of the active ingredient triclopyr. A mixture of Trimec 937 Herbicide and Garlon 4 Herbicide should be used in accordance with the more restrictive of label limitations and precautions. No label dosage rates should be exceeded. This product cannot be mixed with any product containing a label prohibition against such mixing. Aerial applications of this tank-mixture can be made with helicopter only.

Three steps for tank-mixing with Garlon 4 Herbicide are suggested. First, add one-third of the required amount of diesel oil or water to the spray tank. Next, add the Trimec 937 Herbicide slowly with agitation, then add another one-third of the carrier to the tank. Finally, add slowly the Garlon 4 Herbicide and the balance of the carrier. Do not mix the chemicals simultaneously and continue the agitation during each step.

High Volume: Mix ½ to 1 gallon of Trimec 937 Herbicide per 100 gallons of water and apply 100 to 300 gallons of spray per acre. The dosage rate and the spray volume depend upon the height and density of the brush and/or weeds. For small broadleaf weeds use the low dosage rate and the low spray volume. Heavy dense stands of brush require the high dosage rate and the high spray volume.

For small applications with small tank sprayers use at the rate of 1 to 1½ fluid ounces of product per gallon of water.

Aerial Foliage Method: Mix ½ to 2 gallons of Trimec 937 Herbicide in enough water to make 15 to 25 gallons total spray mixture per acre. Use enough water to ensure uniform wetting of plants.

Basal Bark Method: Apply with low volume backpack sprayer or power equipment. Volume sprayed per acre will depend on method used and number of stems per acre. Use a coarse spray to avoid drift.

High Volume (Basal Bark) — For high volume applications, apply a coarse spray as a drench treatment to the base of stems and trunks up to a height of 18 to 24 inches. Total coverage of the stems and root collars is essential. Spray until runoff and pooling at the ground line is noticed.

Mix 3 to 5 gallons of Trimec 937 Herbicide with 95 to 97 gallons of oil (diesel oil, No. 1 or No. 2 fuel oil, kerosene, or mineral oil). Spray volumes will depend up on the sizes, types, and densities of the species present.

Low Volume (Basal Bark) — For low volume applications, apply a uniform spray pattern to all sides of the stems and trunks up to a height of 18 to 24 inches. Treat the entire circumference of the tree.

Mix a full oil spray containing 33% Trimec 937 Herbicide, 10 to 20% surfactant, and 47 to 57% diesel oil. Suggested surfactants include Cide-Kick, Cide-Kick II, or other surfactants/penetrants appropriate for oil soluble herbicides. Substitutes for diesel oil as a diluent include the following basal oils: Androc Oil, Hy-Grade I, Arborchem Basal Oil, JLB Oil Plus, and other blends formulated for basal bark applications.

Cut Surface — Stump: This method can be used at any time of the year, but is more effective when applied as soon as possible after trees are cut. Spray the entire stump, particularly bark and exposed roots. Complete control requires a thorough drenching. Use this method after original or capital clearing. It is the primary step toward a chemical brush control program on newly cleared highways and right-of-ways. Spray is most effective and economical on tree stumps with diameters larger than 3 to 4 inches.

Mix ½ to 1 gallon of Trimec 937 Herbicide with 25 gallons of diesel oil, basal oils, penetrant oils, or mineral oil. Apply to freshly cut tree stumps with a low volume knapsack sprayer using a cone nozzle. Spray thoroughly the cut surfaces, bark, and exposed roots. Treat the entire circumference of the tree. Drench until run-off to the soil surface is noticed.

For painting freshly cut stumps, mix 2 quarts of Trimec 937 Herbicide with 1.0 gallon of basal oil and thoroughly paint all surfaces of the stump.

Frill Treatment: This treatment is recommended for culling trees with trunk diameters greater than 5 to 6 inches. Make a frill by using an axe to cut overlapping notches in a continuous ring around the trunk near its base. Cut through the bark, but do not remove chips.

Mix 3 to 4 gallons of Trimec 937 Herbicide in 100 gallons of diesel oil or mineral oil and treat freshly cut frills at any time of the year. Spray or pour the spray mixture into the frills without runoff.

BRUSH CONTROLLED:

- | | | |
|--------------|--------------|-----------------|
| Ash | Cherry | Multiflora Rose |
| Aspen | Cottonwood | Oak |
| Birch | Dogwood | Pine |
| Blackberry | Elm | Shortleaf Pine |

| Jimsonweed | Purslane | Yarrow |

ORNAMENTAL LAWNS & TURF (cool season grasses other than bentgrass)

Not for use on turf being grown for sale or other commercial use as sod, or for commercial seed production, or for research purposes.

Clothing Requirement Statements: When using this product, wear long-sleeved shirt, long pants, socks, shoes, chemical resistant gloves and eye protection. It is recommended that safety glasses include front, brow and temple protection.

Personal Hygiene Statements: After using this product, rinse gloves before removing, remove clothing and launder separately before reuse, and promptly and thoroughly wash hands and exposed skin with soap and water. Remove saturated clothing as soon as possible and shower.

Re-entry statement: Do not allow people (other than applicator) or pets on treatment area during application. Do not enter treatment areas until spray has dried or dust has settled.

USE PRECAUTIONS: Avoid drift of spray mist to vegetables, flowers, ornamental plants, shrubs, trees and other desirable plants. Do not pour spray solutions near desirable plants. Do not use on carpetgrass, dichondra, St. Augustinegrass, bentgrass, nor on lawns or turf where desirable clovers are present. Use only lawn-type sprayers. Avoid fine sprays; coarse sprays are less likely to wind-drift. Do not spray roots of ornamentals and trees. Do not exceed specified dosages for any area; be particularly careful within the dripline of trees and other ornamental species. Do not apply to newly seeded grasses until well established. Do not spray when air temperature exceeds 85°F. Seed can be sown 3 to 4 weeks after application. Care should be taken not to make applications where runoff could carry the chemical to food crops or grazing lands where cattle, sheep, goats, swine or poultry would be exposed.

11 2 11

INSTRUCTIONS: Maximum control of weeds will be obtained from spring or early fall applications when weeds are actively growing. Avoid spraying during long, excessively dry or hot periods unless adequate irrigation is available. Do not irrigate within 24 hours after application.

General Application: Apply at the rate of 2 to 3 pints in 20 to 260 gallons of water per acre (¾ to 1.1 fluid ounces in 0.5 to 6 gallons of water per 1,000 square feet). Use higher rates when using the higher volume of water per acre.

The maximum application rate to turf is 0.8 pounds 2,4-D acid equivalent per acre per application per site. The maximum number of broadcast applications per treatment site is 2 per year.

Controlled Droplet Applicator: Add 1½ pints to the HERBI container and fill with water. Spray contents over 33,000 square feet. Avoid overlapping between spray patterns.

Small Area Applications: Not recommended for hose-end sprayers. Spray at any time during the growing season when weeds are actively growing. On new lawns — wait until the grass has hardened off — usually after it has been mowed at least three times. Poor weed control may result if spray is applied during drought or just before rain. Do not water within 24 hours after treatment.

SPRAY PREPARATIONS FOR PRESSURE SPRAYERS

Amount of Product to Use:		Area To Treat	
Tablespoons	Fluid Ounces	Gallons of Water	Square Feet
1½	¾	1	1000
