

CHLORDANE 4 EMULSIFIABLE CONCENTRATE

INGREDIENTS

ACTIVE INGREDIENTS:

Technical Chlordane*	45%
Petroleum Distillate	45%

INERT INGREDIENTS	10%
Total	100%

*Equivalent to 27% octachloro-4,7-methanotetrahydroindane and 18% related compounds

CONTAINS 4 POUNDS CHLORDANE PER GALLON

ONE U.S. GALLON

WARNING

KEEP OUT OF REACH OF CHILDREN

See other precautions on the side panel.

GOLD KIST, INC., Atlanta, Ga. 30301

Chlordane Emulsifiable Concentrate

Do NOT USE, POUR, SPILL OR STORE NEAR HEAT OR OPEN FLAME.

DIRECTIONS FOR USE

Dilute the concentrate in the required volume of water by stirring or agitation; agitate while spraying. If allowed to stand, re-agitate before use.

USE AGAINST TERMITES

TERMITES—Remove all wood and other cellulose material in contact with the soil. Prepare a water emulsion containing 1 percent of chlordane by mixing 1 gallon of this concentrate in 50 gallons of water (1 quart in 12½ gallons), and apply as follows:

- Under attached porches, platforms, and utility entrances, apply 1 gallon of water mixture per 10 square feet of soil surface.
- Along inside of foundation walls and around piers, apply 2 gallons of water mixture per 5 linear feet.
- Along outside of foundation walls, dig a trench 8 to 10 inches wide and 30 inches deep, but not below the footing; pour a portion of the water mixture evenly into the trench throughout its length, replace part of the soil, and apply additional water mixture. Repeat this process until trench is filled. If foundation wall is shallow (15) inches or less, apply no less than 2 gallons of the mixture per 5 linear feet; if foundations are deep (more than 15 inches), apply 4 gallons per 5 linear feet.
- Unexposed soil under terraces, patios, sidewalks, driveways, etc., apply treatment close to foundation wall by drilling, or through shrinkage cracks, so that soil along foundation wall will receive 2 gallons of the water mixture per 5 linear feet.
- For soil treatment prior to pouring concrete slabs, apply 1 gallon of the water mixture per 10 square feet. Where slabs join inside walls or service entrances, apply 2 gallons per 5 linear feet.

Inspect treated areas annually and retreat if necessary.

USE FOR FLY REDUCTION

FLIES—To control adult houseflies and maggots, use 1 quart of concentrate mixed in 5 gallons of water to spray outside of buildings, manure piles, and garbage cans and dumps. A minimum of 1 pint of finished spray should be used to cover 100 square feet of surface. Repeat as necessary. DO NOT APPLY TO DAIRY ANIMALS OR ANIMALS BEING FINISHED FOR SLAUGHTER. DO NOT APPLY INSIDE DAIRY BARN, MILK ROOMS, OR OTHER AREAS WHERE FOOD IS PROCESSED, HANDLED, OR STORED.

CAUTION

Harmful if swallowed. Contact with skin causes toxic symptoms. Avoid breathing spray mist. In case of contact with skin, wash with soap and water. Avoid contamination of feed and foodstuffs. Do not use or store near heat or open flame. Highly toxic to Fish and Wildlife. Do not contaminate streams, lakes, or ponds with this material, nor apply to any area not specified on the label. Do not contaminate water by cleaning of equipment or disposal of wastes.

Do not reuse container. Destroy when empty.
