

[2270-2]

DIRECTIONS

Apply this product as a space spray for the control of flying insects: Flies, Mosquitoes, Gnats and Flying Wasps.

Atomize the product to the entire room after closing off all air currents. We recommend pressure or test hood of atomizing equipment, preferably through the Permanent or Portable Spray Equipment. The spray should be directed upward at the walls and ceilings in a way that as many insects as possible can be contacted with a direct spray. The room should be left for at least ten minutes before re-entry. Repeat the treatment as preferred. It is recommended to re-treat the room under normal conditions on a regular basis for the control of new infestations of the named insects. There is no long-term test. There should be no insecticide residue on all surfaces. Handling equipment should be thoroughly cleaned and disinfected. Dead insects should be disposed of in a safe manner. For use in food processing plants, consult the regularly printed label on all product premises.

ACTIVE INGREDIENTS	100%
Petroleum Distillate	99.52%
N-Octyl bicycloheptene dicarboximide	0.48%
Technical Piperonyl Butoxide	0.00%
Pyrethrins	0.00%
