

[2270-75]

DIRECTIONS

Use EXCELCIDE PG CONTACT SPRA for the control of crawling insects, i.e., Roaches, Silverfish, Fleas, Ants.

Using a good sprayer, such as the EXCELCIDE Tank-Type Sprayer, spray PG Contact Spray thoroughly into and around all cracks and crevices, behind switch boxes, sinks, double wall partitions, baseboards, window or door casings, and conduits and conduit terminal boxes, to drive out and kill named insects. The application must be done with sufficient care and air pressure so that the insects hiding in these places will be contacted with the spray. For flea control, thoroughly spray the sites mentioned above and also spray the floor area that is affected.

For control of ants, thoroughly spray ant trails and places where ants enter the premises, hitting as many of the ants as possible. Repeated spraying is necessary.

Repeat treatment at regular periodic intervals or when re-infestation occurs.

CAUTION: Harmful if swallowed. Foods should be removed or covered during treatment. All food processing surfaces should be covered, or thoroughly cleaned before using. Do not use or store near heat or open flame. This product is not intended for household use.

St. Louis, Missouri 63112

DIRECTIONS

Use EXCELCIDE PG CONTACT SPRA for the control of small flying insects, such as Flies, Mosquitoes, Gnats, and Flying Moths (Mediterranean Flour Moths, Indian Meal Moths and Angoumois Grain Moths) in their exposed stages.

Spray PG Contact Spra into entire room, after closing off all air currents. The spray should be directed upward at the walls and ceilings in such a way that as many insects as possible can be contacted with the spray or mist. Room should be left closed for at least ten minutes after spraying. Repeat as often as necessary in order to keep the named insects under control. Periodic, regular spraying of PG Contact Spra assists in the control of new batches of the named insects, thereby reducing insect infestations. Sweep up all dead and dying insects and destroy them at the close of the 10 minute period.

ACTIVE INGREDIENTS 100%
Petroleum Distillate
Technical Piperonyl Butoxide*
Pyrethrins

* Consists of (butylcarbityl)
(6-propylpiperonyl) ether and related
compounds.
