

DIRECTIONS

DIRECTIONS FOR USE OF EXCELICIDE WATER SOLUBLE RAT AND MOUSE BAIT: Add the contents of this container to one gallon of water. No mixing or stirring is necessary. DO NOT ATTEMPT TO DISSOLVE SMALL SIZE PARTS which remain on the bottom of the container. Put dispenser together and quickly turn right side up. The EXCELICIDE 1-quart plastic liquid bait dispenser is designed for very use and has less tendency to break than glass dispensers of this type. Set fount on a clear level surface where rats are noted. Keep fount clean and well supplied at all times. Do not place fount where freezing may occur. Do not place poison water founts in areas accessible to children, pets and domestic animals.

Where a continuous source of infestation prevails from nearby dumps or fields, permanent bait stations should be used and baits replenished as needed.

MICE: For controlling mice follow the same general directions as for rats except bait placements may be smaller and more placements should be made. Mice are more difficult to control than rats and complete control may take a longer period of baiting. Liquid dispensers should be placed at 8 to 10 foot intervals.

IMPORTANT

BAITING SHOULD CONTINUE UNTIL COMPLETE LACK OF FEEDING IS NOTED. THIS SHOULD BE FROM 5 TO 14 DAYS. It is recommended that other EXCELICIDE Prepared Baits be used in conjunction with this product especially where there is an ample supply of fresh water. At the completion of the control program, collect founts and destroy or mark so that they will not be used for any other purpose.

CAUTION:

EXCELICIDE Water Soluble Rat and Mouse Bait contains as its active ingredient an anti-coagulant chemical which if taken by humans, domestic animals, or pets may reduce the clotting ability of the blood and serious hemorrhage may result. In case baits are swallowed, give a tablespoonful of salt in a glass of warm water and repeat until vomit fluid is clear. Call a physician immediately.

NOTE FOR PHYSICIANS: When a human has been known to have ingested EXCELICIDE Water Soluble Rat and Mouse Bait, blood transfusions combined with intravenous injections and oral doses of Vitamin K are indicated as in the case of hemorrhage caused by overdose of Dicumarol®.
