

GENERAL INFORMATION

Liquid Weed Killer & Semi-Soil Sterilant No. 5 is a liquid weed killer and soil sterilant to be applied undiluted as a spray on non-crop land areas where bare ground is desired. The degree of weed control and duration of effect will vary with the amount of chemical applied, soil type, rainfall, and other conditions.

DIRECTIONS: Apply throughout the year except when the ground is frozen. Best results are obtained after predominant species are well established in late Spring or early Summer. Before treating calibrate equipment to insure uniform cover of the area to be treated. Check the equipment manufacturer's recommendations for the necessary calibrations. Measure out the proper amount and apply.

EQUIPMENT: Power sprayers, compressed air hand sprayers, knap sack sprayers, or an ordinary sprinkler can be used to apply this product. No dilution or agitation is required.
