DIRECTIONS

EXCELCIDE VESTIBULE FLY SPRA for control of Flying Moths, Flies, Mosquitoes and Gnats.

Atomize into the entire room, so that the room is filled with mist, after closing off all air currents. We recommend a pressure as best method of atomizing. The spray should be directed upward at the walls and ceilings in such a way that as many of the insects as possible can be contacted with a direct mist. Room should be left closed for at least ten minutes after spraying. Remain outside area being treated, and ventilate the treated area when treatment is completed. Repeat as often as necessary, preferably, once a day, in order to keep the named insects under control. Periodic, regular spraying of EXCELCIDE Vestibule Fly Spra assists in the control of new batches of the named insects, thereby reducing insect infestations. Care should be exercised in covering all exposed food and food handling equipment during spraying to eliminate possibility of dead flies contaminating foodstuffs. Dead insects should be regularly removed from plant premises.

EPA Reg. No. 2270-228

VESTIBULE FLY SPRA

A Space Spray for Flying Insects

FOR INDUSTRIAL USE IN FOOD PROCESSING
AND WAREHOUSE INDUSTRIES

ACTIVE INGREDIENTS	100%
Petroleum Distillate	99.55%
