EXCELCIDE REST-A-PEST NO. 112 FOR USE IN DYNA-FOG MACHINES

IMPORTANT: Read this section first

DILUTION INSTRUCTIONS: To prepare this concentrated product for use, dilute 1 part concentrate to 50 parts fuel oil or kerosene. For best results, it is recommended that only the amount of diluted product required per application be mixed.

AGITATE THOROUGHLY BEFORE USING

AFTER DILUTION, FOLLOW THESE DIRECTIONS: For control of flying insects either inside or outside - Drosophila gnats (V. negar and Fruit Moths) and for such crawling insects as cockroaches, confused flour beetles, ants, cadelles, silverfish, carpet beetles that would be exposed at the time of application.

RECOMMENDATIONS: Most effective inside fogging of food processing plants and insides of structures normally found on parks, golf courses and outdoor theatres, is accomplished during dry weather. External openings to building should be closed with exception of providing an exhaust draft. If possible, buildings or enclosure should remain equal in pressure to outside. Exposed foods should be guarded by plastic protective covering or by temporary relocation.

Plan fogging operation so that insects may be totally moved away from food. Fogging should be done from windward side when spraying fog or outside of building.

NOTICE: The manufacturer does not warrant that the product is safe for use on all surfaces. The user should test the product on a small area first. The manufacturer is not responsible for any damage caused by the use of the product on any surface. The manufacturer is not responsible for any damage caused by the use of the product on any surface. The manufacturer is not responsible for any damage caused by the use of the product on any surface.

EXCELCIDE REST-A-PEST NO. 1.2

FOR USE IN THERMAL-TYPE GENERATORS SUCH AS THE DYNA-FOG MACHINE FOR CONTROL OF CERTAIN CRAWLING AND FLYING INSECTS

A concentrate to be diluted with oil. (See dilution instructions on side panel)

ACTIVE INGREDIENTS

Parathion Methyl  
Diazinon  
Permethrin

Other active ingredients and other active ingredients

DIRECTIONS: For outdoor fogging, the area to be treated (parks, golf courses, outdoor theatres) and the areas immediately adjacent to the area normally found in the above area and food processing plant buildings should be completely covered with visible fog at a rate of about 2.0 parts per acre. The same rate for indoor treatment, although in the latter case no more than 1 gallon of diluted concentrate per 1,000 cubic feet should be used. The particle size of the concentrate should be 10 microns. Machine is to operate at 100% fog output. Fogging should be continued until necessary.

Spray EXCELCIDE from a distance of 10-15 feet at windward side. Fogging should be done as possible during the day. After spraying, the area should be kept closed and doors should be kept closed until the fog has cleared. The fog should be kept at a density of 2.0 parts per acre.

CAUTION: This product is highly toxic to humans and animals. It is a strong irritant to the eyes, nose, throat, and lungs. It is also a skin irritant. Avoid contact with skin and clothing. If contact occurs, wash immediately with plenty of water. If inhaled, move to fresh air. If swallowed, do not induce vomiting. Seek medical attention immediately. Keep out of reach of children. Store in a cool, dry place. Do not use in enclosed spaces.
