This product is a ready-to-use formula, needing no dilution. To control existing cockroach infestations: American Cockroach, German Cockroach, and Oriental Cockroach. Apply to baseboard areas, around water pipes, surfaces behind and beneath sinks, lockers, tables, pallets and similar areas where insects hide or through which they may enter. This residual application can best be achieved through a low-pressure, conventional garden-type tank sprayer.

For control of existing flying insects (Houseflies, Drosophila Gnats, Mosquitoes, and exposed stages of Indian Meal Moths, Mediterranean Flour Moths, and Angoumois Grain Moths) thorough residual application of this product should be applied in a residual wetting-down treatment to surfaces on which the insects alight or crawl.

For control of exposed stages of stored product insects: Confused Flour Beetles, Saw-Toothed Grain Beetles, Cadelles, apply this product residually as directed above for cockroach control, using the same principle of laying down a residual deposit that will continue to kill for days after application. Since these insects harbor and breed in flour dust, such deposits must be vacuumed and cleaned before making application.
