SADDLE BROOK, N.J. 07662

SUGGESTED SPREADER SETTINGS			
RATE	LAWN BEAUTY	SOFT	CYCLONE
5 lbs. on 1000 sq. ft.	8 1/4		

The age, condition of spreader, speed of operation and roughness of lawn will cause variations in the rate applied. These suggested spreader settings are for your guidance only.

# DURSBAN\*

## GRANULES

### CONTROLS

- CHINCH BUGS, SOD WEBWORMS (Lawn moths)
- ANTS, CRICKETS, BROWN DOG TICKS
- CUTWORMS, EARWIGS, SOWBUGS (Millbugs)

### IN LAWN:

#### DIRECTIONS FOR USE:

When insects are present, apply the contents of one 5 lb. bag evenly on 5,000 sq. ft. of lawn.

The first brood of CHINCH BUGS appears in the Spring, the second brood about August 15. Continue to apply DURSIBAN GRANULES on dry grass. Brush the granules off with a stiff broom. In heavy speed action, water the lawn immediately after application. This is especially necessary if chinch bugs are feeding deep in a heavy thatched lawn. Repeat as necessary.

SOD WEBWORMS (Lawn moths) begin to appear in the Spring and are full grown by June. A complete life cycle takes only 21 to 28 days. Begin control treatment in the Spring. Drive insects upward, water lawn frequently. Apply DURSIBAN GRANULES if insects are present at the lawn surface.

ANTS, CRICKETS, BROWN DOG TICKS, EARWIGS, SOWBUGS (Millbugs), CUTWORMS, and other lawn insects are controlled by DURSIBAN GRANULES. For more information on these insects, see DURSIBAN GRANULES label.
